1. Initial Data Load

The initial Data load will consist of the vendor entering data during live interactive testing for 4 patients with various scenarios. The data entry will include demographic data, Immunization histories and specific conditions for each patient.

1.1. Juana Mariana Gonzales Initial Data Load

Demonstrates the ability to record pediatric demographic data, historical vaccinations, and clinical conditions for 6-year old Juana Mariana Gonzales. There are no transactions associated with this test case.

Test Story

Description

The practice site for the scenario is Shoreline Pediatrics. The EHR vendor loads demographic data and clinical history for Juana Mariana Gonzales. The data includes immunizations provided by the practice.

The vendor also enters:

• Two vaccines administered at other sites

o an influenza vaccine given at a local pharmacy

o an inactivated polio vaccine given elsewhere and not reported to the registry – the history includes an adverse reaction (febrile seizure) 8 hours after the vaccine was administered

• Adverse reaction to inactivated polio vaccine (febrile seizure) and the date and source of information

• Allergy to egg albumin administered at this site (the registry has different CVX date and lot number information for this vaccine)

NOTE: the historical vaccines will be imported during the Registry query (e.g. from another practice)

PostCondition

The EMR has recorded all of the pediatric demographic in the record created for Juana Mariana Gonzales.

Test Objectives

Register New Patients: The system must allow a user to enter distinguishing information about patients so that providers can uniquely identify patients who have similar sounding names or other similar identifying information. For example, twins living in the same household will have similar dates of birth, addresses, and may have similar names. EHRs or other clinical software must be able to store information to successfully match with patients in immunization registries, if the information is available. The information includes the mother's maiden name, whether the patient was part of a multiple birth, and the order of the multiple birth. This information allows the provider to correctly identify the patient and also helps assure a match when the EHR send the patient's information to external systems such as an immunization registry.

2. Query and Display Response

Querying the registry will consist of the vendor creating Z44 messages for each patient to be sent to the registry. The response will be processed as part of the ?Display, Reconcile, Import and Update Immunization Information? activity.

2.1. Patient Juana Mariana Gonzales

EMR Generates a Z44 query to the Immunization Registry to retrieve the Evaluated History and Forecast for Juana Mariana Gonzales.

Test Story

Description

Query the Registry for Juana Mariana Gonzales

Comments

No Comments

PreCondition

Juana Mariana Gonzales is entered as a patient in the EMR with complete Demographic data, Immunization History Data, and Clinical Data according to the steps in the 'Juana Mariana Gonzales Initial Data Load'

PostCondition

A Z44 Query is generated and submitted to the Immunization Registry/Test tool.

Test Objectives

Real Time Request/Receive Patient Immunization History: The system sends a request to the public health immunization registry ?on demand? (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother?s maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (RSP) ? HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).

Evaluation Criteria

The vendor can produce a valid Z44 query in accordance with the test data correctly and without ommission.
The data in the message corresponds to the data in the EMR and contains all test data attributes supplied.

2.1.3. View and Compare response to request for vaccination history for Juana Mariana Gonzales

Test Step Type: TA_RESPONDER
The EMR displays the Immunization History results (Z42) returned in response to the Z44 Query and compare to those in the EMR.

Test Story

Description

The Immunization Registry returns an Evaluated History and Forecast (Z42) to the EMR in response to the query for patient (Juana Mariana Gonzales). The provider reviews the immunization history from the registry and compares to the immunization history in the EMR. The provider reconciles the information from these sources, importing information known only to the registry, retaining information that is more accurately reflected in the local EMR:

The physician accesses the record for Juana Mariana Gonzales and:
• Reconciles the EHR vaccine history with the history retrieved from the registry:
o Accepts new vaccines from the registry data
o If the EHR does not already flag the first MMRV as invalid, the provider updates the first MMRV to indicate it is "invalid" as it was given too early (as notified by the registry)
o Retains the local history for influenza and polio vaccines that are not included in the registry report.

Comments

No Comments

PreCondition

A Z44 query has been submitted to the Immunization Registry and a Z42 response is provided back to the EMR.

PostCondition

Evaluated Immunization History returned from the registry is reconciled and imported into the patient record (Juana Mariana Gonzales)

Test Objectives

Compare Public Health Immunization Registry (IIS) Immunization History to EHR Immunization History: The public health immunization registry has returned the requested immunization history for a patient. The EHR is able to display the immunization history received from the registry as well as the immunization history already present in the EHR so that a user can compare them. The EHR provides a way for the provider to view both histories, determine what is different (if anything), and update the existing EHR immunization history with new information from the public health registry if he or she chooses to do so. The system must store the new information as structured data as part of the patient's local immunization history and include the time of the update and the source of the new information.

Review Patient Immunization History: To assist with the ordering process, the EHR or other clinical software system allows a user to specify standard views of patient immunization information for each vaccine dose administration, including patient-specific data (e.g., age on dates of administration, etc.).

Evaluation Criteria

1. The EMR displays the information returned from the Immunization Registry according to the Juror Document.
