Tests the ability to create a valid VXU^V04 message

Test Story

Description

A two month old male infant, Russell Clinton Richardson, is brought to the West Clinic for a well child visit by his mother Maria Elizabeth Richardson (nee Billington) and his father John William Richardson. A clinic staff member collects basic patient demographic information including name, date of birth and sex. A clinic provider, Wilma Thomas (physician ID 654) reviews the patient's vaccination history and determines that the child previously received Hepatitis B vaccine 1 day after birth and 1 month after birth. The staff member determines that the patient needs DTaP, Hib, IPV, Rotavirus and Pneumococcal vaccinations. Because of the patient's status of Native American, he qualifies for all Vaccine For Children (VFC) supplied vaccines under the status of VFC eligible – American Indian/Alaska Native. The parents are given 5 Vaccine Information Sheets (VIS) to review. After reading them, they agree that the child should receive all the vaccinations recommended. They also agree that the data should be shared once it is incorporated into the local IIS. Appropriate doses of DTaP/Hib/IPV (Pentacel), Rotavirus (RotaTeq) and Pneumococcal (Prevnar 13) are selected from the clinic's stock of publicly funded vaccines. A clinician, Lily Jackson (ID 7824) prepares and administers the doses to the patient and then enters the data into the EHR and transmits it to the IIS.

1.1.2. Consume acknowledgement message

Tests the ability to consume a valid ACK message

Test Story

Description

The IIS returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.

Comments

No Comments

PreCondition

A VXU message is generated by the EHR.

PostCondition

No PostCondition

Test Objectives

No Test Objectives

Evaluation Criteria

The acknowledgement message is consumed by the system responsible for the content of the administration message without error.

Notes to Testers

DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the health information technology's ability to receive and process a Return an Acknowledgement Z23 message (in response to a "Send Unsolicited Immunization Update Using a VXU" Z22 message) in which NO Error is returned in the message.

The exact wording and format of the display in the health information technology (HIT) is not in-scope for this test.

Return an Acknowledgement

The receiving HIT system being tested shall process the Z23 ACK message correctly; a positive notification indicating that the ACK message was processed correctly need not be made visible in the system.

1.2. TC-2

Adult administration

Test Story

Description

An adult is seen at a clinic. Historical vaccinations are recorded and new vaccines are administered and documented.

1.2.1. Send administration message

Tests the ability to create a valid VXU^V04 message

Test Story

Description

A 32 year old female, Elise Wong, visits the West Clinic for a well woman visit. A clinic staff member collects basic patient demographic information including name, date of birth and sex. A clinic provider, Wilma Thomas (physician ID 654) reviews the patient's vaccination history and determines that Elise has received her influenza vaccinations on 10/12/2014 and 11/12/2013, but is in need of a tetanus booster. Because of the patient's age she does not qualify for Vaccine For Children (VFC) supplied vaccine. Elise is given the appropriate Vaccine Information Sheet (VIS) to review. After reading it, she agrees to receive the recommended vaccination. She also agrees that the data should be shared once it is incorporated into the local IIS. An appropriate dose of Tdap (TENIVAC) is selected from the clinic's stock of privately funded vaccines. A clinician, Lily Jackson (ID 7824) prepares and administers the doses to the patient and then enters the data into the EHR and transmits it to the IIS.

1.2.2. Consume acknowledgement message

Tests the ability to consume a valid ACK message

Test Story

Description

The IIS returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.

Comments

No Comments

PreCondition

A VXU message is generated by the EHR.

PostCondition

No PostCondition

Test Objectives

No Test Objectives

Evaluation Criteria

The acknowledgement message is consumed by the system responsible for the content of the administration message without error.

DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the health information technology's ability to receive and process a Return an Acknowledgement Z23 message (in response to a "Send Unsolicited Immunization Update Using a VXU" Z22 message) in which NO Error is returned in the message.

The exact wording and format of the display in the health information technology (HIT) is not in-scope for this test.

Return an Acknowledgement

The receiving HIT system being tested shall process the Z23 ACK message correctly; a positive notification indicating that the ACK message was processed correctly need not be made visible in the system.

1.3.1. Send administration message

Tests the ability to create a valid VXU^V04 message

Test Story

Description

An 11.5 year old female, Katherine Mackenzie Benton, is brought to the West Clinic for a third and final dose of HPV vaccine. She is accompanied by her mother Kari Michelle Benton (nee Jones). A clinic staff member collects basic patient demographic information including name, date of birth and sex. The mother is given the appropriate Vaccine Information Sheet (VIS) to review. After reading it, the mother agrees that the child should receive the HPV vaccine, but she chooses not to share the data once it is incorporated into the local IIS. A clinic provider, Wilma Thomas (physician ID 654) places an order for the vaccination. While the patient is covered by insurance, the plan does not cover this vaccination and she qualifies for Vaccine For Children (VFC) supplied vaccines under the status of VFC eligible - Underinsured. An appropriate dose of HPV (CERVARIX) is selected from the clinic's stock of publically funded vaccines. A clinician, Lily Jackson (ID 7824) prepares and administers the dose to the patient and then enters the data into the EHR and transmits it to the IIS.

DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the health information technology's ability to receive and process a Return an Acknowledgement Z23 message (in response to a "Send Unsolicited Immunization Update Using a VXU" Z22 message) in which NO Error is returned in the message.

The exact wording and format of the display in the health information technology (HIT) is not in-scope for this test.

Return an Acknowledgement

The receiving HIT system being tested shall process the Z23 ACK message correctly; a positive notification indicating that the ACK message was processed correctly need not be made visible in the system.

1.4.2. Consume acknowledgement message

Tests the ability to consume a valid ACK message

Test Story

Description

The IIS returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.

Comments

No Comments

PreCondition

A VXU message is generated by the EHR.

PostCondition

DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the health information technology's ability to receive and process a Return an Acknowledgement Z23 message (in response to a "Send Unsolicited Immunization Update Using a VXU" Z22 message) in which NO Error is returned in the message.

The exact wording and format of the display in the health information technology (HIT) is not in-scope for this test.

Return an Acknowledgement

The receiving HIT system being tested shall process the Z23 ACK message correctly; a positive notification indicating that the ACK message was processed correctly need not be made visible in the system.

1.5.1. Send administration message

Tests the ability to create a valid VXU^V04 message

Test Story

Description

An 18 month old male, Daryl Andre Johnson, is brought to the West Clinic for a well child visit by his father James Terrance Johnson. Daryl's twin brother, born 5 minutes before Daryl, was not able to make it to the clinic. A clinic staff member collects basic patient demographic information including name, date of birth and sex. A clinic provider, Wilma Thomas (physician ID 654) reviews the patient's vaccination history and determines that the child requires a Hep A vaccination. The child is covered by insurance and does not qualify for all Vaccine For Children (VFC) supplied vaccines. The father is given the Vaccine Information Sheet (VIS) to review. After reading it, the father agrees that the child should receive the Hep A vaccine. He also agrees that the data should be shared once it is incorporated into the local IIS. An appropriate dose of Hep A (VAQTA) is selected from the clinic's stock of privately funded vaccines. A clinician, Lily Jackson (ID 7824) prepares and administers the doses to the patient, however the patient moves unexpectedly during the administration and only a portion of the dose is actually administered. The clinician enters the data into the EHR as a partial administration and transmits it to the IIS.

1.5.2. Consume acknowledgement message

Tests the ability to consume a valid ACK message

Test Story

Description

The IIS returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.

Comments

No Comments

PreCondition

A VXU message is generated by the EHR.

PostCondition

DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the health information technology's ability to receive and process a Return an Acknowledgement Z23 message (in response to a "Send Unsolicited Immunization Update Using a VXU" Z22 message) in which NO Error is returned in the message.

The exact wording and format of the display in the health information technology (HIT) is not in-scope for this test.

Return an Acknowledgement

The receiving HIT system being tested shall process the Z23 ACK message correctly; a positive notification indicating that the ACK message was processed correctly need not be made visible in the system.

1.6.1. Send administration message

Tests the ability to create a valid VXU^V04 message

Test Story

Description

A 1 year old male, Tyler Owen Banks, is brought to the West Clinic for a well child visit. He is accompanied by his father Karl Leonard Banks. A clinic staff member collects basic patient demographic information including name, date of birth and sex. A clinic provider, Joe Smith (physician ID 123) reviews the patient's vaccination history and determines that the child requires Hib, Hep A, MMR and Varicella vaccinations. The child is covered by insurance and does not qualify for all Vaccine For Children (VFC) supplied vaccines. The father is given the appropriate Vaccine Information Sheets (VIS) to review. After reading them, the father agrees that the child should receive the Hib, Hep A and MMR vaccines but refuses the Varicella vaccine. He also agrees that the data should be shared once it is incorporated into the local IIS. Appropriate doses of Hib (HIBERIX), Hep A (VAQTA) and MMR (M-M-R II) are selected from the clinic's stock of privately funded vaccines. A clinician, Lily Jackson (ID 456) prepares and administers the doses to the patient and then enters the data into the EHR and transmits it to the IIS.

1.6.2. Consume acknowledgement message

Tests the ability to consume a valid ACK message

Test Story

Description

The IIS returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.

Comments

No Comments

PreCondition

A VXU message is generated by the EHR.

PostCondition

DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the health information technology's ability to receive and process a Return an Acknowledgement Z23 message (in response to a "Send Unsolicited Immunization Update Using a VXU" Z22 message) in which NO Error is returned in the message.

The exact wording and format of the display in the health information technology (HIT) is not in-scope for this test.

Return an Acknowledgement

The receiving HIT system being tested shall process the Z23 ACK message correctly; a positive notification indicating that the ACK message was processed correctly need not be made visible in the system.

1.7.2. Consume acknowledgement message

ests the ability to consume a valid ACK message

Test Story

Description

The IIS returns an acknowledgement message indicating that a fatal error was found during the course of processing the message.

Comments

No Comments

PreCondition

A VXU message is generated by the EHR.

PostCondition

No PostCondition

Test Objectives

No Test Objectives

Evaluation Criteria

The acknowledgement message is consumed by the system responsible for the content of the administration message without error.

DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the health information technology's ability to receive and process a Return an Acknowledgement Z23 message (in response to a "Send Unsolicited Immunization Update Using a VXU" Z22 message) in which NO Error is returned in the message.

The exact wording and format of the display in the health information technology (HIT) is not in-scope for this test.

Return an Acknowledgement

The receiving HIT system being tested shall process the Z23 ACK message correctly; a positive notification indicating that the ACK message was processed correctly need not be made visible in the system.

1.8. TC-8

Historical administration resulting in fatal error

Test Story

Description

A patient is seen at a clinic. A historical vaccination is recorded but the IIS is unable to process the administration message, rejects it and returns a fatal error in the acknowledgement message.

Comments

PreCondition

No PreCondition

PostCondition

The returned error must be visible in the EHR.

Test Objectives

This test case assesses the ability of the EHR to accept an acknowledgement message with a fatal error being returned by the IIS.

1.8.1. Send administration message

Tests the ability to create a valid VXU^V04 message

Test Story

Description

A 66 year old female, Helen Barrett, comes to the West Clinic for a physical. A clinic staff member collects basic patient demographic information including name, date of birth and sex. The patient reports that she received a Zoster vaccination at a local pharmacy on her 65th birthday. The clinic staff determine that no further vaccinations are required. A clinician, Lily Jackson (ID 7824) enters the historical data into the EHR and transmits it to the IIS.

1.8.2. Consume acknowledgement message

Tests the ability to consume an ACK message containing a fatal error

Test Story

Description

The IIS has a mapping error in their CVX table and is unable to recognize the CVX code sent in RXA-5 even though it is valid. The IIS is unable to identify the appropriate vaccine, which is a required element, and rejects the message. The acknowledgement message returned contains errors for the table mapping, missing required field (RXA-5) and missing required segment (RXA).

Comments

No Comments

PreCondition

A VXU message is generated by the EHR.

PostCondition

Test Objectives

No Test Objectives

Evaluation Criteria

The errors returned in the ACK message must be visible in the EHR.

DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the health information technology's ability to receive and process a Return an Acknowledgement Z23 message (in response to a "Send Unsolicited Immunization Update Using a VXU" Z22 message) in which an Error is returned in the message.

The exact wording and format of the display in the health information technology (HIT) is not in-scope for this test.

Return an Acknowledgement	
The receiving HIT system being tested shall process the Z23 ACK error notification message correctly; an equivalent of the following information <u>must be made visible</u> in the system:	
Vaccine code not recognized - message rejected	

1.9. TC-9

New administration resulting in soft error

Test Story

Description

A patient is seen at a clinic. A new administration is recorded. The IIS is able to process the administration message but finds a soft error (warning) which it returns in the acknowledgement message.

PostCondition

The returned error must be visible in the EHR.

Test Objectives

This test case assesses the ability of the EHR to accept an acknowledgement message with a soft warning error being returned by the IIS.

1.9.1. Send administration message

Tests the ability to create a valid VXU^V04 message

Test Story

Description

A 1 month old female, Ashley Jennifer Broadbent, is brought to the West Clinic for a well child visit by her mother Ellen Broadbent (nee Layton). A clinic staff member collects basic patient demographic information including name, date of birth and sex. A clinic provider, Wilma Thomas (physician ID 654) reviews the patient's vaccination history and determines that the child requires a Hep B vaccination. The child is covered by insurance and does not qualify for all Vaccine For Children (VFC) supplied vaccines. The mother is given the Vaccine Information Sheet (VIS) to review. After reading it, she agrees that the child should receive the Hep B vaccine. She also agrees that the data should be shared once it is incorporated into the local IIS. An appropriate dose of Hep B (ENGERIX-B) is selected from the clinic's stock of privately funded vaccines. A clinician, Lily Jackson (ID 7824) prepares and administers the doses to the patient and enters the data into the EHR and transmits it to the IIS.

1.9.2. Consume acknowledgement message

Tests the ability to consume an ACK message containing a warning

Test Story

Description

A mapping error in the IIS software results in the IIS being unable to recognize the administration site sent in RXR-2 even though it is valid. The acknowledgement message returned contains a warning for an invalid value.

Comments

No Comments

PreCondition

A VXU message is generated by the EHR.

PostCondition

No PostCondition

Test Objectives

No Test Objectives

Evaluation Criteria

The error returned in the acknowledgement message is visible in the system responsible for the content of the administration message.

Notes to Testers

DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the health information technology's ability to receive and process a Return an Acknowledgement Z23 message (in response to a "Send Unsolicited Immunization Update Using a VXU" Z22 message) in which an Error is returned in the message.

The exact wording and format of the display in the health information technology (HIT) is not in-scope for this test.

Return an Acknowledgement	
The receiving HIT system being tested shall process the Z23 ACK error notification message correctly; an equivalent of the following information <u>must be made visible</u> in the system:	
Administration Site not recognized - site data will not be saved

New administration resulting in multiple soft errors

Test Story

Description

A patient is seen at a clinic. A new administration is recorded. The IIS is able to process the administration message but finds multiple soft errors (warnings) which it returns in the acknowledgement message.

The returned error must be visible in the EHR.

Test Objectives

This test case assesses the ability of the EHR to accept an acknowledgement message with multiple soft errors being returned by the IIS.

1.10.1. Send administration message

Tests the ability to create a valid VXU^V04 message

Test Story

Description

A 4 year old female, Lacy Wells, is brought to the West Clinic for a well child visit by her guardian Janelle Trudeau. A clinic staff member collects basic patient demographic information including name, date of birth and sex. A clinic provider, Wilma Thomas (physician ID 654) reviews the patient's vaccination history and determines that the child requires DTaP, polio, MMR and varicella vaccinations. The child is covered by insurance and does not qualify for all Vaccine For Children (VFC) supplied vaccines. The guardian is given the appropriate Vaccine Information Sheet (VIS) to review. After reading it, she agrees that the child should receive all the vaccines. She also agrees that the data should be shared once it is incorporated into the local IIS. Appropriate doses of DTaP-IPV (KINRIX) and MMRV (ProQuad) are selected from the clinic's stock of privately funded vaccines. A clinician, Lily Jackson (ID 7824) prepares and administers the doses to the patient and enters the data into the EHR and transmits it to the IIS.

1.10.2. Consume acknowledgement message

Tests the ability to consume an ACK message containing multiple warnings

Test Story

Description

A mapping error in the IIS software results in the IIS being unable to recognize either administration site sent in RXR-2 even though it is valid. The acknowledgement message returned contains warnings for the invalid values.

Comments

No Comments

PreCondition

A VXU message is generated by the EHR.

PostCondition

No PostCondition

Test Objectives

No Test Objectives

Evaluation Criteria

The errors returned in the acknowledgement message are visible in the system responsible for the content of the administration message.

DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the health information technology's ability to receive and process a Return an Acknowledgement Z23 message (in response to a "Send Unsolicited Immunization Update Using a VXU" Z22 message) in which an Error is returned in the message.

The exact wording and format of the display in the health information technology (HIT) is not in-scope for this test.

Return an Acknowledgement

The receiving HIT system being tested shall process the Z23 ACK error notification message correctly; an equivalent of the following information must be made visible in the system:

Administration Site not recognized - site data will not be saved

Administration Site not recognized - site data will not be saved

1.11. TC-11

Historical administration resulting in system error

Test Story

Description

A patient is seen at a clinic. A historical vaccination is recorded but the IIS is unable to process the administration message, rejects it and returns a fatal error in the acknowledgement?message.

PostCondition

The returned error must be visible in the EHR.

Test Objectives

This test case assesses the ability of the EHR to accept an acknowledgement message with a fatal system error being returned by the IIS.

1.11.1. Send administration message

Tests the ability to create a valid VXU^V04 message

Test Story

Description

A 68 year old male, Manuel Diego Vasquez, comes to the West Clinic for a physical. A clinic staff member collects basic patient demographic information including name, date of birth and sex. The patient reports that he received a pneumococcal vaccination at a local pharmacy on October 21, 2014. The clinic staff determine that no further vaccinations are required. A clinician, Lily Jackson (ID 7824) enters the historical data into the EHR and transmits it to the IIS.

1.11.2. Consume acknowledgement message

Tests the ability to consume an ACK message containing a system error

Test Story

Description

Due to an error in the IIS software, the IIS is unable to recognize the HL7 version ID sent in MSH-12 even though it is valid. The acknowledgement message returned contains an error for an unsupported version ID.

Comments

No Comments

PreCondition

A VXU message is generated by the EHR.

PostCondition

No PostCondition

Test Objectives

No Test Objectives

Evaluation Criteria

The error returned in the acknowledgement message is visible in the system responsible for the content of the administration message.

Notes to Testers

DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the health information technology's ability to receive and process a Return an Acknowledgement Z23 message (in response to a "Send Unsolicited Immunization Update Using a VXU" Z22 message) in which an Error is returned in the message.

The exact wording and format of the display in the health information technology (HIT) is not in-scope for this test.

Return an Acknowledgement	
The receiving HIT system being tested shall process the Z23 ACK error notification message correctly; an equivalent of the following information <u>must be made visible</u> in the system:	
Version ID not recognized - message rejected	

2. Evaluated History and Forecast Group

This set of tests evaluates the EHR's ability to create well-formed queries and gracefully accept the response messages. It evaluates that the clinician is shown the results of the query.

2.1. Q R TC-1

QBP for young adult with immunization history

Test Story

Description

A young adult is seen by a clinician. The clinician uses the EHR to request and evaluated history and forecast. The IIS returns an evaluated history and forecast for that person.

Comments

No Comments

PreCondition

The person has a record in the IIS.

DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the EHR technology's ability to display required core data elements from the information received in the Evaluated Immunization History and Immunization Forecast Z42 message. Additional data from the message or from the EHR are permitted to be displayed by the EHR. Grayed-out fields in the Juror Document indicate where no data for the data element indicated were included in the Z42 message for the given Test Case.

The format of this Juror Document is for ease-of-use by the Tester and does not indicate how the EHR display must be designed.

The Evaluated Immunization History and Immunization Forecast data shown in this Juror Document are derived from the Z42 message provided with the given Test Case; equivalent data are permitted to be displayed by the EHR. The column headings are meant to convey the kind of data to be displayed; equivalent labels/column headings are permitted to be displayed by the EHR.

Patient Information				
Patient Identifier	Patient Name	DOB	Gender	Tester Comment
12993456	Sally S Stanley	02/14/1980	Female	

When displayed in the EHR with the Evaluated Immunization History and Immunization Forecast, these patient demographics data may be derived from either the received immunization message or the EHR patient record. When displaying demographics from the patient record, the EHR must be able to demonstrate a linkage between the demographics in the message (primarily the patient ID in PID-3.1) and the patient record used for display to ensure that the message was associated with the appropriate patient.

2.2.2. return response

return response to query for an adult with historical smallpox vaccination

Test Story

Description

Query is returned for Clement S Stanley. Clement has a number of historical dose records, including one for small pox. This vaccine is not validated and so has no dose validity. All other doses are valid. Mr. Stanley is due for a pneumococcal vaccine and an influenza vaccine.

Juror Comments		

DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the EHR technology's ability to display required core data elements from the information received in the Evaluated Immunization History and Immunization Forecast Z42 message. Additional data from the message or from the EHR are permitted to be displayed by the EHR. Grayed-out fields in the Juror Document indicate where no data for the data element indicated were included in the Z42 message for the given Test Case.

The format of this Juror Document is for ease-of-use by the Tester and does not indicate how the EHR display must be designed.

The Evaluated Immunization History and Immunization Forecast data shown in this Juror Document are derived from the Z42 message provided with the given Test Case; equivalent data are permitted to be displayed by the EHR. The column headings are meant to convey the kind of data to be displayed; equivalent labels/column headings are permitted to be displayed by the EHR.

Patient Information				
Patient Identifier	Patient Name	DOB	Gender	Tester Comment
123456	Clement S Stanley	02/14/1950	Male	
When displayed in the EHR with the Evaluated Immunization History and Immunization Forecast, these patient demographics data may be derived from either the received immunization message or the EHR patient record. When displaying demographics from the patient record, the EHR must be able to demonstrate a linkage between the demographics in the message (primarily the patient ID in PID-3.1) and the patient record used for display to ensure that the message was associated with the appropriate patient.

DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the EHR technology's ability to display information notifying the HIT user that a Return Acknowledgement with No Person Records Z33 message was received (in response to an Evaluated Immunization History and Immunization Forecast Z44 query message). Additional data from the message or from the EHR are permitted to be displayed by the EHR.

The format of this Juror Document is for ease-of-use by the Tester and does not indicate how the EHR display must be designed.

The data shown in this Juror Document are derived from the test data provided with the given Test Case; equivalent data are permitted to be displayed by the EHR. The column headings are meant to convey the kind of data to be displayed; equivalent labels/column headings are permitted to be displayed by the EHR.

Patient Information				
Patient Identifier	Patient Name	DOB	Gender	Tester Comment
177993456	Sam S Standard	02/14/1980	Male	
When displayed in the EHR with the notification indicating that a Return Acknowledgement with No Person Records Z33 message was received, these patient demographics data are derived from the EHR patient record.				

Evaluated Immunization History and Immunization Forecast
The EHR shall display a notification indicating that the query for an Evaluated Immunization History and Immunization Forecast is complete but no matching records were found for the person in the query.

2.4. Q R TC-4

Query finds too many matches

Test Story

Description

This test evaluates the ability of the EHR to gracefully accept a response where too many matches are found, based on the parameters sent in the query. Note that this query only expects an evaluated history and forecast when an exact match is found.

Comments

The initiating clinician should be alerted to the failure to get an exact match.

PreCondition

No PreCondition

PostCondition

No PostCondition

Test Objectives

The initiating clinician should be alerted to the failure to get an exact match.

Evaluation Criteria

The EHR receives the response and alerts the clinician that too many matches were found.

Notes to Testers

2.4.1. Query that finds too many matches

Query will find too many matches

Test Story

Description

This test sends a query that will find too many matches.

Comments

The sending system will need to accept a response indicating that too many matches were found.

PreCondition

More than one person in the IIS matching the parameters in the query exists.

PostCondition

Response indicates that there are more than one match (too many) and the clinician is informed.

DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the EHR technology's ability to display information notifying the HIT user that a Return Acknowledgement with No Person Records Z33 message was received (in response to an Evaluated Immunization History and Immunization Forecast Z44 query message). Additional data from the message or from the EHR are permitted to be displayed by the EHR.

The format of this Juror Document is for ease-of-use by the Tester and does not indicate how the EHR display must be designed.

The data shown in this Juror Document are derived from the test data provided with the given Test Case; equivalent data are permitted to be displayed by the EHR. The column headings are meant to convey the kind of data to be displayed; equivalent labels/column headings are permitted to be displayed by the EHR.

Patient Information				
Patient Identifier	Patient Name	DOB	Gender	Tester Comment
177993456	Sam S Johnson	02/14/1980	Male	
When displayed in the EHR with the notification indicating that a Return Acknowledgement with No Person Records Z33 message was received, these patient demographics data are derived from the EHR patient record.				

Evaluated Immunization History and Immunization Forecast
The EHR shall display a notification indicating that the query for an Evaluated Immunization History and Immunization Forecast is complete but too many matching records were found for the person in the query.
