CDC Immunization Related Requirements Test Plan (CNI) v5.3

This test plan is to be used for the testing of the CDC EHR Immunization Related Requirements developed under Contract-No: 200-2014-60994 . All test cases are required to be executed. The test plan includes both functional and interoperability tests including Vaccine Update Notifications (HL7 V2.5.1 VXU/Z22) and Query and Response (Evaluated History and Forecast Group Z44/Z42).

This version is updated for use in the 2016/2017 test cycle. It adds support for alignment with ONC 2015 Certification Criteria.

1. Initial Data Load

The initial Data load will consist of the vendor entering data during live interactive testing for 4 patients with various scenarios. The data entry will include demographic data, Immunization histories and specific conditions for each patient.

1.1. Juana Mariana Vazquez Initial Data Load

Demonstrates the ability to record pediatric demographic data, historical vaccinations, and clinical conditions for a school-aged child Juana Mariana Vazquez. There are no transactions associated with this test case.

Test Story

Description

The practice site for the scenario is Shoreline Pediatrics. The EHR vendor loads demographic data and clinical history for Juana Mariana Vazquez. The data includes immunizations provided by the practice.

The vendor also enters:

- Two vaccines administered at other sites
 - 1. an influenza vaccine given at a local pharmacy
 - 2. an inactivated polio vaccine given elsewhere and not reported to the registry - the history includes an adverse reaction (febrile seizure) 8 hours after the vaccine was administered
- Adverse reaction to inactivated polio vaccine (febrile seizure) and the date and source of information

NOTE: the historical vaccines will be imported during the Registry query (e.g. from another practice)

Comments

Set-up step evaluating EMR functions for capturing and storing patient pediatric demographic data, historical immunizations, and clinical conditions. There is no transaction associated with this test step.

Pre Condition

No PreCondition

Post Condition

The EMR has recorded all of the pediatric demographic data, historical immunizations, and clinical conditions in the record created for Juana Mariana Vazquez using the test data provided.

Test Objectives

Register New Patients: The system must allow a user to enter distinguishing information about patients so that providers can uniquely identify patients who have similar sounding names or other similar identifying information. For example, twins living in the same household will have similar dates of birth, addresses, and may have similar names. EHRs or other clinical software must be able to store information to successfully match with patients in immunization registries, if the information is available. The information includes the mother's maiden name, whether the patient was part of a multiple birth, and the order of the multiple birth. This information allows the provider to correctly identify the patient and also helps assure a match when the EHR sends the patient's information to external systems such as an immunization registry.

Record Past Immunizations: The EHR or other clinical software system allows providers to enter information about immunizations given elsewhere (e.g., by another doctor, at a public health clinic, pharmacy, etc.) with incomplete details.

Request/Receive Patient Immunization Data and Identify Source: The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.

Supporting data for:

Compare Public Health Immunization Registry (IIS) Immunization History to EHR Immunization History: The public health immunization registry has returned the requested immunization history for a patient. The EHR is able to display the immunization history received from the registry as well as the immunization history already present in the EHR so that a user can compare them. The EHR provides a way for the provider to view both histories, determine what is different (if anything), and update the existing EHR immunization history with new information from the public health registry if he or she chooses to do so. The system must store the new information as structured data as part of the patient's local immunization history and include the time of the update and the source of the new information.

Identify Adverse Event: The EHR or other clinical software system enables capture of structured data regarding adverse events.

Evaluation Criteria

Evaluation criteria is defined within each test step.

Notes for Testers

Pre Condition

The EMR has recorded all of the pediatric demographic data in the record created for Juana Mariana Vazquez.

Post Condition

The immunization history known to the local practice is loaded into the record created for Juana Mariana Vazquez.

Test Objectives

Record Past Immunizations: The EHR or other clinical software system allows providers to enter information about immunizations given elsewhere (e.g., by another doctor, at a public health clinic, pharmacy, etc.) with incomplete details.

Request/Receive Patient Immunization Data and Identify Source: The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.

Supporting data for:

Compare Public Health Immunization Registry (IIS) Immunization History to EHR Immunization History: The public health immunization registry has returned the requested immunization history for a patient. The EHR is able to display the immunization history received from the registry as well as the immunization history already present in the EHR so that a user can compare them. The EHR provides a way for the provider to view both histories, determine what is different (if anything), and update the existing EHR immunization history with new information from the public health registry if he or she chooses to do so. The system must store the new information as structured data as part of the patient's local immunization history and include the time of the update and the source of the new information.

Receive Dose Not Indicated Alert for Single Vaccine Order: The EHR or other clinical software system notifies the provider in instances when there are single or combination vaccine orders that are inconsistent with the expected timing intervals included in the vaccine forecast. Inconsistencies include suggestion of different date(s) for ordering the vaccine(s) or indication the vaccine(s) is/are no longer required.

Evaluation Criteria

Evaluation Criteria: Vendor successfully records all immunization data known to the local practice as provided, with all required attributes indicated by [Y]. The coded values are not expected to be displayed to the user, but it is expected that the value selected has the identified meaning, and it is expected that the system will use the coded value when the attribute is conveyed in later transactions:

1.1.3. Enter Initial Immunization Data for Juana Mariana Vazquez from Another Practice

Test Step Type: SUT_MANUAL

Patient History from another practice is entered into the EMR.

Test Story

Description

The EHR vendor loads immunization history data from another practice into the record for Juana Mariana Vazquez.

Comments

No Comments

Pre Condition

The EMR has recorded all of the pediatric demographic data in the record created for Juana Mariana Vazquez.

Post Condition

The immunization history from another practice is loaded into the record created for Juana Mariana Vazquez.

Test Objectives

Record Past Immunizations: The EHR or other clinical software system allows providers to enter information about immunizations given elsewhere (e.g., by another doctor, at a public health clinic, pharmacy, etc.) with incomplete details.

Request/Receive Patient Immunization Data and Identify Source: The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.

Supporting data for:

Compare Public Health Immunization Registry (IIS) Immunization History to EHR Immunization History: The public health immunization registry has returned the requested immunization history for a patient. The EHR is able to display the immunization history received from the registry as well as the immunization history already present in the EHR so that a user can compare them. The EHR provides a way for the provider to view both histories, determine what is different (if anything), and update the existing EHR immunization history with new information from the public health registry if he or she chooses to do so. The system must store the new information as structured data as part of the patient's local immunization history and include the time of the update and the source of the new information.

1.2. Juan Marcel Marina Initial Data Load

Demonstrates the ability to record pediatric demographic data, historical vaccinations, and clinical conditions for 1 1/2-year old Juan Marcel Marina. There are no transactions associated with this test case.

Test Story

Description

The practice site for the scenario is Shoreline Pediatrics. The EHR vendor loads demographic data and clinical history for Juan Marcel Marina. The data includes a clinical history of congenital asplenia.

Comments

Set-up step evaluating EMR functions for capturing and storing patient pediatric demographic data, historical immunizations, and clinical conditions. There is no transaction associated with this test step.

Pre Condition

No PreCondition

Post Condition

The EMR has recorded all of the pediatric demographic data, historical immunizations, and clinical conditions in the record created for Juan Marcel Marina using the test data provided.

Test Objectives

Register New Patients: The system must allow a user to enter distinguishing information about patients so that providers can uniquely identify patients who have similar sounding names or other similar identifying information. For example, twins living in the same household will have similar dates of birth, addresses, and may have similar names. EHRs or other clinical software must be able to store information to successfully match with patients in immunization registries, if the information is available. The information includes the mother's maiden name, whether the patient was part of a multiple birth, and the order of the multiple birth. This information allows the provider to correctly identify the patient and also helps assure a match when the EHR send the patient's information to external systems such as an immunization registry.

Supporting data for:

Modify Antigen Recommendations Based on Active Diagnoses: *The system notifies the provider of any conflicts between recommended vaccines in the updated forecast and the patient's current or historical diagnoses.*

Evaluation Criteria

Evaluation criteria is defined within each test step.

2. Juana Mariana Vazquez Visit

Juana Mariana Vazquez visits the provider where her immunization history is retrieved from the registry and reconciled with the local information in the medical record to determine vaccines that are due. Vaccinations are ordered and administered. The parents refuse the Polio vaccine due to prior issues. The vaccines are reported to the immunization registry and a vaccine summary is available for the patient.

2.1. Query the Registry for Juana Mariana Vazquez

EMR generates a Z44 query to the Immunization Registry to retrieve the Evaluated History and Forecast for Juana Mariana Vazquez. The Z42 response is used to display, reconcile, and update the immunization information in the EMR.

Test Story

Description

The EMR generates a Z44 query to the Immunization Registry to retrieve the Evaluated History and Forecast for Juana Mariana Vazquez. Querying the registry will consist of the vendor creating Z44 messages for Juana Mariana Vazquez to be sent to the registry. The response will be processed as part of the 'Display, Reconcile, Import and Update Immunization Information' activity.

Using the Z42 Response to Immunization Registry Query, the EMR displays the Evaluated History and Forecast to the user for reconciliation and update. The vendor will receive information back from the registry and show the ability to view and reconcile, and import the information returned by the registry (NOTE: the Z42 message will be provided either manually, or as part of the tool). This test will also look at the system's ability to view the forecast returned by the registry, and create a new forecast after reconciling the information.

Pre Condition

Juana Mariana Vazquez is entered as a patient in the EMR with complete Demographic data, Immunization History Data, and Clinical Data according to the steps in the 'Juana Mariana Vazquez Initial Data Load'

Post Condition

A Z44 Query is generated and submitted to the Immunization Registry/Test tool, and a Z42 response is returned.

Test Objectives

Select New Patient: The system must allow a user to enter distinguishing information about patients so that providers can uniquely identify patients who have similar sounding names or other similar identifying information. For example, twins living in the same household will have similar dates of birth, addresses, and may have similar names. EHRs or other clinical software must be able to store information to successfully match with patients in immunization registries, if the information is available. The information includes the mother's maiden name, whether the patient was part of a multiple birth, and the order of the multiple birth. This information allows the provider to correctly identify the patient and also helps assure a match when the EHR sends the patient's information to external systems such as an immunization registry.

Real Time Request/Receive Patient Immunization History: The system sends a request to the public health immunization registry "on demand" (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (QBP/RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).

Compare Public Health Immunization Registry (IIS) Immunization History to EHR Immunization History: The public health immunization registry has returned the requested immunization history for a patient. The EHR is able to display the immunization history received from the registry as well as the immunization history already present in the EHR so that a user can compare them. The EHR provides a way for the provider to view both histories, determine what is different (if anything), and update the existing EHR immunization history with new information from the public health registry if he or she chooses to do so. The system must store the new information as structured data as part of the patient's local immunization history and include the time of the update and the source of the new information.

Request/Receive Patient Immunization Data and Identify Source: The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.

View Immunization Forecast: The system provides a view of the immunization forecast provided by the public health immunization registry (IIS). The display includes the forecast from the registry and includes recommended vaccination dates, minimum (earliest) date, date due, and maximum (latest) date for each vaccine included in the forecast.

View Reconciled Immunization Forecast: The EHR or other clinical software system has the ability to re-evaluate and update the immunization forecast using a patient's newly updated immunization history, where the updated forecast results from the reconciliation of immunization data contained in the public health immunization registry with immunization data contained in the EHR. Processing the new forecast can be internal to the EHR or it can use an external forecasting service.

Review Patient Immunization History: To assist with the ordering process, the EHR or other clinical software system allows a user to specify standard views of patient immunization information for each vaccine dose administration, including patient-specific data (e.g., age on dates of administration, etc.).

Record Past Immunizations: The EHR or other clinical software system allows providers to enter information about immunizations given elsewhere (e.g., by another doctor, at a public health clinic, pharmacy, etc.) with incomplete details.

Support for:

Receive Dose Not Indicated Alert for Single Vaccine Order: The EHR or other clinical software system notifies the provider in instances when there are single or combination vaccine orders that are inconsistent with the expected timing intervals included in the vaccine forecast. Inconsistencies include suggestion of different date(s) for ordering the vaccine(s) or indication the vaccine(s) is/are no longer required.

Evaluation Criteria

Evaluation criteria is defined within each test step.

2.1.1. Select Patient Juana Mariana Vazquez

Test Step Type: SUT MANUAL

Select patient Juana Mariana Vazquez, distinguishing the patient from other patients with similar demographics (similar names).

Test Story

Description
Juana Mariana Vazquez is selected as the patient and her record is opened in the EMR.
Comments
No Comments
Pre Condition
Juana Mariana Vazquez Initial Data Load completed.
Post Condition
Juana Mariana Vazquez is the active working patient in the EMR.
Test Objectives
<p>Select New Patient: The system must allow a user to enter distinguishing information about patients so that providers can uniquely identify patients who have similar sounding names or other similar identifying information. For example, twins living in the same household will have similar dates of birth, addresses, and may have similar names. EHRs or other clinical software must be able to store information to successfully match with patients in immunization registries, if the information is available. The information includes the mother's maiden name, whether the patient was part of a multiple birth, and the order of the multiple birth. This information allows the provider to correctly identify the patient and also helps assure a match when the EHR send the patient's information to external systems such as an immunization registry.</p>
Evaluation Criteria
Tester shall verify that the product can distinguish Juana Mariana Vazquez from similar sounding names using all of the pediatric demographics. Tester verifies that the product can select the correct patient. The following subset of the patient demographic attributes entered during the initial data load are verified to assure that the correct patient is selected:
<ul style="list-style-type: none">• Patient Name: First - Juana• Patient Name: Middle - Mariana• Patient Date of Birth - 11/01/2011• Birth Time - 11:05• Patient Gender (Administrative Sex) - F• Patient Address: Street - 4345 Standish Way• Patient Address: City - Stamford• Patient Address: State - CT• Patient Address: Country - US• Patient Address: Zipcode - 06903• Patient Telephone Number - (203) 555-1212

2.1.2. Query Registry for vaccination history and forecast for Juana Mariana Vazquez

Test Step Type: SUT_INITIATOR

The EMR generates a Z44 query for immunization history and forecast correctly and without omission according to supplied test data.

Test Story

Description
The provider uses the EMR to query the Immunization Registry for an Evaluated History and Forecast based on information known to the Immunization Registry.

Pre Condition
Juana Mariana Vazquez Initial Data Load is completed.
Juana Mariana Vazquez is the active working patient in the EMR.
Post Condition
The Immunization Registry responds with Evaluated Vaccine History and Forecast for Juana Mariana Vazquez
Test Objectives
Real Time Request/Receive Patient Immunization History: The system sends a request to the public health immunization registry "on demand" (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (QBP/RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).
Support for:
Receive Dose Not Indicated Alert for Single Vaccine Order: The EHR or other clinical software system notifies the provider in instances when there are single or combination vaccine orders that are inconsistent with the expected timing intervals included in the vaccine forecast. Inconsistencies include suggestion of different date(s) for ordering the vaccine(s) or indication the vaccine(s) is/are no longer required.

2.1.3. View and Compare response to request for vaccination history for Juana Mariana Vazquez

Test Step Type: TA_RESPONDER

The EMR displays the Immunization History results (Z42) returned in response to the Z44 Query and compare to those in the EMR.

Test Story

Description

The Immunization Registry returns an Evaluated History and Forecast (Z42) to the EMR in response to the query for patient (Juana Mariana Vazquez). The provider reviews the immunization history from the registry and compares to the immunization history in the EMR. The provider reviews the information from these sources, identifying information known only to the registry, and identifying information that is more accurately reflected in the local EMR:

The physician accesses the record for Juana Mariana Vazquez and the EHR Differentiates:

The following vaccinations are available only to the EMR:

- diphtheria, tetanus toxoids and acellular pertussis vaccine, 5 pertussis antigens (CVX 106) administered 11/20/2015

The EHR differentiates the following vaccinations that are available from both the IIS that and the local EMR:

- measles, mumps, rubella virus vaccine (CVX 03) administered 8/22/2012 (an invalid dose)

Pre Condition

Juana Mariana Vazquez Initial Data Load is completed.

Juana Mariana Vazquez is the active working patient in the EMR.

A Z44 query has been submitted to the Immunization Registry and a Z42 response is provided back to the EMR.

Post Condition

Evaluated Immunization History returned from the registry is reviewed and compared to the immunizations in the patient record (Juana Mariana Vazquez)

Test Objectives

Real Time Request/Receive Patient Immunization History: The system sends a request to the public health immunization registry "on demand" (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's

maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).

Compare Public Health Immunization Registry (IIS) Immunization History to EHR Immunization History: The public health immunization registry has returned the requested immunization history for a patient. The EHR is able to display the immunization history received from the registry as well as the immunization history already present in the EHR so that a user can compare them. The EHR provides a way for the provider to view both histories, determine what is different (if anything), and update the existing EHR immunization history with new information from the public health registry if he or she chooses to do so. The system must store the new information as structured data as part of the patient's local immunization history and include the time of the update and the source of the new information.

Review Patient Immunization History: To assist with the ordering process, the EHR or other clinical software system allows a user to specify standard views of patient immunization information for each vaccine dose administration, including patient-specific data (e.g., age on dates of administration, etc.).

Support for:

Receive Dose Not Indicated Alert for Single Vaccine Order: The EHR or other clinical software system notifies the provider in instances when there are single or combination vaccine orders that are inconsistent with the expected timing intervals included in the vaccine forecast. Inconsistencies include suggestion of different date(s) for ordering the vaccine(s) or indication the vaccine(s) is/are no longer required.

Evaluation Criteria

1. The EMR is able to receive the response from the Immunization Registry.
2. The EMR displays the information returned from the Immunization Registry according to the Juror Document.
 - Complete review for Polio administered 3/23/2012, MMR 8/22/2012
 - remaining vaccines may be reviewed only for the vaccine name and date administered
3. The EMR is able to differentiate the vaccines in the comparison between the EHR and the vaccination history

Notes for Testers

The juror document also contains the verification content for the immunization forecast, which is tested and graded separately at step 5: View the vaccination history for Juana Mariana Vazquez. The criteria for this step is tested separately here and graded only with respect to the vaccine history.

Visualization of the adverse reaction for the Polio Vaccine in the history returned from the IIS is an advanced function. The adverse event is returned in the message and may be displayed during comparison by the EMR, but it is not listed in the Juror document.

DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the EHR technology's ability to display required core data elements from the information received in the Evaluated Immunization History and Immunization Forecast Z42 response message. Additional data from the message or from the EHR are permitted to be displayed by the EHR. Grayed-out fields in the Juror Document indicate where no data for the data element indicated were included in the Z42 message for the given Test Case.

The format of this Juror Document is for ease-of-use by the Tester and does not indicate how the EHR display must be designed.

The Evaluated Immunization History and Immunization Forecast data shown in this Juror Document are derived from the Z42 message provided with the given Test Case; equivalent data are permitted to be displayed by the EHR. The column headings are meant to convey the kind of data to be displayed; equivalent labels/column headings are permitted to be displayed by the EHR.

When displayed in the EHR with the Evaluated Immunization History and Immunization Forecast, these patient demographics data may be derived from either the received immunization message or the EHR patient record. When displaying demographics from the patient record, the EHR must be able to demonstrate a linkage between the demographics in the message (primarily the patient ID in PID-3.1) and the patient record used for display to ensure that the message was associated with the appropriate patient.

2.1.4. Mark first MMR Dose as Invalid

Test Step Type: SUT_MANUAL

Identify the first MMR dose which is given too early, as invalid. If the EHR does not already flagged the first MMR as invalid, the provider updates the first MMR to indicate it is ?invalid? as it was given too early (as notified by the registry).

Test Story

Description

If the EHR does not already flag the first MMR as invalid, the provider updates the first MMR to indicate it is "invalid" as it was given too early (as notified by the registry)

Comments

If the EMR already recognizes the dose as invalid, then this step may be skipped.

Pre Condition

Initial Data Load -

Step 2: Enter Initial Immunization Data for Juana Mariana Vazquez: Immunizations from practice

Post Condition

MMR status for the first MMR dose is set to invalid.

Test Objectives

dose validity is an important aspect of:

View Reconciled Immunization Forecast: The EHR or other clinical software system has the ability to re-evaluate and update the immunization forecast using a patient's newly updated immunization history, where the updated forecast results from the reconciliation of immunization data contained in the public health immunization registry with immunization data contained in the EHR. Processing the new forecast can be internal to the EHR or it can use an external forecasting service.

Evaluation Criteria

Evaluation Criteria: The vendor is able to record that the first MMR vaccination dose is invalid with a reason that it was given too early, and therefore the dose administered on 11/22/2012 should indicated dose '1', and the dose administered two weeks prior to the current visit should indicate dose '2'.

Notes for Testers

In the steps that follow, the MMR returned from the registry will be imported and the vaccine forecasting steps wil further verify the correct documentation of the dose that will be imported from the registry as dose '1'.

2.1.5. View the vaccination forecast for Juana Mariana Vazquez

Test Step Type: TA_RESPONDER

Vendor can successfully display the current Immunization Forecast (vaccination names and recommended vaccination dates) as returned by the Registry (Z42).

Test Story

Pre Condition

A Z44 query has been submitted to the Immunization Registry and a Z42 response is provided back to the EMR.

Post Condition

Immunization Forecast returned from the registry has been displayed to the user.

Test Objectives

View Immunization Forecast: The system provides a view of the immunization forecast provided by the public health immunization registry (IIS). The display includes the forecast from the registry and includes recommended vaccination dates, minimum (earliest) date, date due, and maximum (latest) date for each vaccine included in the forecast.

Evaluation Criteria

1. The EMR displays the information returned from the Immunization Registry according to the Juror Document.
2. Verify that all forecast vaccines and dates returned by the registry are displayed to the user.

Notes for Testers

The verification content for the vaccine forecast also is part of the juror document in the prior step 3: View and Compare response to request for vaccination history for Juana Mariana Vazquez. The criteria for this step is tested separately here and graded only with respect to the vaccine forecast. Date when Vaccine Overdue may be omitted for the Influenza Vaccine.

For MMR, the 2nd dose is due 10/31/15 according to the schedule. Since the first one was given too early, the child is behind. Verify that the EMR shows all 3 dates returned by the registry:

- Earliest Date to Give
- Vaccine Due Date
- Date When Vaccine Overdue

DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the EHR technology's ability to display required core data elements from the information received in the Evaluated Immunization History and Immunization Forecast Z42 response message. Additional data from the message or from the EHR are permitted to be displayed by the EHR. Grayed-out fields in the Juror Document indicate where no data for the data element indicated were included in the Z42 message for the given Test Case.

The format of this Juror Document is for ease-of-use by the Tester and does not indicate how the EHR display must be designed.

The Evaluated Immunization History and Immunization Forecast data shown in this Juror Document are derived from the Z42 message provided with the given Test Case; equivalent data are permitted to be displayed by the EHR. The column headings are meant to convey the kind of data to be displayed; equivalent labels/column headings are permitted to be displayed by the EHR.

When displayed in the EHR with the Evaluated Immunization History and Immunization Forecast, these patient demographics data may be derived from either the received immunization message or the EHR patient record. When displaying demographics from the patient record, the EHR must be able to demonstrate a linkage between the demographics in the message (primarily the patient ID in PID-3.1) and the patient record used for display to ensure that the message was associated with the appropriate patient.

2.1.6. Reconcile and import vaccinations from Evaluated History and Forecast for Juana Mariana Vazquez

Test Step Type: SUT_MANUAL

The Provider uses the EMR to compare the immunization history results (Z42) returned by the Immunization Registry in response to the Z44 Query with the immunization history in the local system, and reconcile (import/update) records.

Test Story

Description Juana Mariana Vazquez immunization registry provided Evaluated History and Forecast is reconciled with the Immunization history information in the EMR.
Comments No Comments
Pre Condition A Z44 query has been submitted to the Immunization Registry and a Z42 response is provided back to the EMR and the response is available in the EMR for reconciliation and import.
Post Condition Evaluated Immunization History returned from the registry is reconciled and imported into the patient record (Juana Mariana Vazquez)
Test Objectives Request/Receive Patient Immunization Data and Identify Source: The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry. Compare Public Health Immunization Registry (IIS) Immunization History to EHR Immunization History: The public health immunization registry has returned the requested immunization history for a patient. The EHR is able to display the immunization history received from the registry as well as the immunization history already present in the EHR so that a user can compare them. The EHR provides a way for the provider to view both histories, determine what is different (if anything), and update the existing EHR immunization history with new information from the public health registry if he or she chooses to do so. The system must store the new information as structured data as part of the patient's local immunization history and include the time of the update and the source of the new information. Review Patient Immunization History: To assist with the ordering process, the EHR or other clinical software system allows a user to specify standard views of patient immunization information for each vaccine dose administration, including patient-specific data (e.g., age on dates of administration, etc.). Support for: Receive Dose Not Indicated Alert for Single Vaccine Order: The EHR or other clinical software system notifies the provider in instances when there are single or combination vaccine orders that are inconsistent with the expected timing intervals included in the vaccine forecast. Inconsistencies include suggestion of different date(s) for ordering the vaccine(s) or indication the vaccine(s) is/are no longer required.
Evaluation Criteria 1. The user imports returned vaccinations as follows: a. Vaccinations NOT imported: hepatitis B vaccine, pediatric or pediatric/adolescent dosage (CVX 08) administered 12/20/2011 measles, mumps, and rubella virus vaccine (CVX 03) administered 8/22/2012 poliovirus vaccine, inactivated (CVX 10) administered 2/21/2013 [known only to EMR, not available from IIS] Influenza, injectable, quadrivalent, preservative free, pediatric (CVX 161) administered 10/15/2015 [known only to EMR, not available from IIS] b. Vaccinations Imported: hepatitis B vaccine, pediatric or pediatric/adolescent dosage (CVX 08) administered 11/01/2011 hepatitis B vaccine, pediatric or pediatric/adolescent dosage (CVX 08) administered 05/20/2012 diphtheria, tetanus toxoids and acellular pertussis vaccine, 5 pertussis antigens (CVX 106) administered 1/22/2012 diphtheria, tetanus toxoids and acellular pertussis vaccine, 5 pertussis antigens (CVX 106) administered 3/23/2012, Including adverse reaction 31044-1 Reaction, VXC12^fever of >40.5C (105F) within 48 hours of dose diphtheria, tetanus toxoids and acellular pertussis vaccine, 5 pertussis antigens (CVX 106) administered 5/22/2012 diphtheria, tetanus toxoids and acellular pertussis vaccine, 5 pertussis antigens (CVX 106) administered 2/21/2013 Haemophilus influenzae type b vaccine, PRP-OMP conjugate (CVX 49) administered 1/22/2012 Haemophilus influenzae type b vaccine, PRP-OMP conjugate (CVX 49) administered 3/23/2012 Haemophilus influenzae type b vaccine, PRP-OMP conjugate (CVX 49) administered 5/22/2012 Haemophilus influenzae type b vaccine, PRP-OMP conjugate (CVX 49) administered 11/21/2012 poliovirus vaccine, inactivated (CVX 10) administered 1/22/2012 poliovirus vaccine, inactivated (CVX 10) administered 3/23/2012 pneumococcal conjugate vaccine, 13 valent (CVX 133) administered 1/22/2012 pneumococcal conjugate vaccine, 13 valent (CVX 133) administered 3/23/2012 pneumococcal conjugate vaccine, 13 valent (CVX 133) administered 5/22/2012 pneumococcal conjugate vaccine, 13 valent (CVX 133) administered 1/11/2013 rotavirus, live, monovalent vaccine (CVX 119) administered 1/22/2012 rotavirus, live, monovalent vaccine (CVX 119) administered 3/23/2012 Influenza, injectable, quadrivalent, preservative free, pediatric (CVX 161) administered 9/25/2012 Influenza, injectable, quadrivalent, preservative free, pediatric (CVX 161) administered 10/29/2012 Influenza, injectable, quadrivalent, preservative free, pediatric (CVX 161) administered 10/2/2013 Influenza, injectable, quadrivalent, preservative free, pediatric (CVX 161) administered 11/4/2014 hepatitis A vaccine, pediatric/adolescent dosage, 2 dose schedule (CVX 83) administered 11/23/2012 hepatitis A vaccine, pediatric/adolescent dosage, 2 dose schedule (CVX 83) administered 5/23/2013 measles, mumps, rubella virus vaccine (CVX 03) administered 11/22/2015 Varicella virus vaccine (CVX 21) administered 12/15/2013 2. The tester verifies that the Reconciled Patient Immunization History can be displayed to the user.

2.1.7. View the updated vaccination forecast for Juana Mariana Vazquez

Test Step Type: SUT_MANUAL

Using the reconciled vaccine history information, the EMR displays the current Immunization Forecast to the user for Juana Mariana Vazquez.

Test Story

Description
Once the vaccine history is reconciled in the EMR, the vaccine forecast is updated.
Comments
No Comments
Pre Condition
EMR Vaccine History is Reconciled with Immunization History from the IIS (previous step 'Reconcile and import vaccinations from Evaluated History and Forecast returned by the Registry for Juana Mariana Vazquez').
Post Condition
An updated vaccine forecast based upon the reconciled vaccine history is available to the user.
Test Objectives
View Reconciled Immunization Forecast: The EHR or other clinical software system has the ability to re-evaluate and update the immunization forecast using a patient's newly updated immunization history, where the updated forecast results from the reconciliation of immunization data contained in the public health immunization registry with immunization data contained in the EHR. Processing the new forecast can be internal to the EHR or it can use an external forecasting service.
Evaluation Criteria
Tester verifies that the vendor can display the immunization forecast based upon the reconciled vaccination history:
1. Verify that the EMR does not include in reconciled vaccine forecast: IPV due on 4/29/2012
2. Verify that the EMR includes in reconciled vaccine forecast: IPV due on 10/31/2015 Varicella due on 10/31/2015 influenza, unspecified formulation due on 09/01/2016
Notes for Testers
The due date must be in range for the date shown. Vaccine forecast dates may be plus or minus 10 days to accommodate differences in date handling.

2.2. Juana Mariana Vazquez, Enter Orders and Immunizations

Orders and Immunization events, non-administrations, and alerts presented for current visit.

Test Story

Description
This test will consist of ordering vaccines for the test patients, reviewing any alerts caused by specific scenarios, and documenting vaccinations administered to the patients.
Comments
No Comments
Pre Condition
Juana Mariana Vazquez is entered as a patient in the EMR with complete Demographic data, Immunization History Data, and Clinical Data according to the steps in the 'Juana Mariana Vazquez Initial Data Load'
Post Condition
Visit orders are entered in Juana Mariana Vazquez' record.
Test Objectives
Notify of Previous Adverse Event: EHRs and other clinical software systems alert providers to previous adverse events for a specific patient, in order to inform clinical decision-making when providers view an existing immunization record.
Record Vaccine Administration Deferral: The EHR or other clinical software system allows a user to enter a reason or reasons why a specific immunization was not given to a patient (e.g., due to contraindication, refusal, etc.). The system also stores that information in a structured way so it can be reported and analyzed as needed.
Receive Dose Not Indicated Alert for Single Vaccine Order: The EHR or other clinical software system notifies the provider in instances when there are single or combination vaccine orders that are inconsistent with the expected timing intervals included in the vaccine forecast. Inconsistencies include suggestion of different date(s) for ordering the vaccine(s) or indication the vaccine(s) is/are no longer required.
Record Vaccine Administration: The EHR or other clinical software system records information about each vaccine administered. The EHR records this information as structured data elements, including, at a minimum: date administered, administering clinician, site of administration (e.g., left arm), immunization type, product, lot number, manufacturer, Vaccine Information Statement date, and quantity of vaccine/dose size.
Enter Vaccination Order: The EHR or other clinical software system allows providers to order immunizations for a patient using filters for type of vaccine, including combination vaccines.
Record Past Immunizations: The EHR or other clinical software system allows providers to enter information about immunizations given elsewhere (e.g., by another doctor, at a public health clinic, pharmacy, etc.) with incomplete details.
Request/Receive Patient Immunization Data and Identify Source: The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.
Sample of data quality checking for vaccine route.
Evaluation Criteria
Evaluation criteria is defined within each test step.

Test Objectives

Enter Vaccination Order: The EHR or other clinical software system allows providers to order immunizations for a patient using filters for type of vaccine, including combination vaccines.

Notify of Previous Adverse Event: EHRs and other clinical software systems alert providers to previous adverse events for a specific patient, in order to inform clinical decision-making when providers view an existing immunization record.

Evaluation Criteria

EMR Records the following order information and Alert. The MMR doses serve to seed checking for the condition that it is too early to give a live vaccine in TestCaseGroup: Juana Mariana Vazquez Visit, TestCase: Juana Mariana Vazquez, Enter Orders and Immunizations, TestStep: Attempt to order Varicella Dose.

2.2.4. Attempt to order Varicella Dose

Test Step Type: SUT_MANUAL
No Description

Test Story

Comments
No Comments
Pre Condition
Initial data load completed with demographic data, vaccination history, and clinical history. Historical Vaccination reconciled and loaded into the EMRMMR dose entered at 14 days prior to the current date in TestCaseGroup: Juana Marian Vazquez Visit, TestCase: Juana Mariana Vazquez, Enter Immunization Data for MMR Given 2 Weeks Prior.
Post Condition
The provider has been issued a warning that it is too soon to give another live virus dose.
Test Objectives
Receive Dose Not Indicated Alert for Single Vaccine Order: The EHR or other clinical software system notifies the provider in instances when there are single or combination vaccine orders that are inconsistent with the expected timing intervals included in the vaccine forecast. Inconsistencies include suggestion of different date(s) for ordering the vaccine(s) or indication the vaccine(s) is/are no longer required.
Evaluation Criteria
There should be a warning that the attempt to give a new Varicella Dose is too early - should get warning that 28 days must pass between 2 live virus vaccines if not administered at the same time due to the prior MMR vaccination 14 days earlier.
Notes for Testers
If the checking that the dose is too early is handled in the forecast logic rather than the orders interface, this is acceptable to demonstrate the capability.

2.2.5. Order Influenza Vaccine

Test Step Type: SUT_MANUAL

The provider selects to order Influenza Vaccine

Test Story

Description

The physician accesses the record for Juana Mariana Vazquez and:

- Selects order for Influenza vaccine

This order is a pre-condition to the following two steps related to recording the Influenza Vaccine

Pre Condition

Initial Data Load completed with demographic data, vaccination history, and clinical history. Historical Vaccination reconciled and loaded into the EMR.

Post Condition

Influenza order entered in patient record.

Test Objectives

Enter Vaccination Order: The EHR or other clinical software system allows providers to order immunizations for a patient using filters for type of vaccine, including combination vaccines.

Evaluation Criteria

EMR records the following order information. The coded values are not expected to be displayed to the user, but it is expected that the value selected has the identified meaning, and it is expected that the system will use the coded value when the attribute is conveyed in later transactions:

Entered BY	Sandra Molina
Ordering Provider	Frank Smith
Entering Organization	Shoreline Pediatrics
Vaccine Event information source	New immunization record (NIP001 00)
Value/Text for Vaccine Type	Influenza, seasonal, injectable, preservative free (CVX 140, NDC 66521-0118-02)
Date/Time Vaccine was recorded	Current Date

2.2.6. Records Influenza Vaccine administration route with data validation checking

Test Step Type: SUT_MANUAL

The provider records the vaccine administration in the EMR and is prevented from incorrectly documenting vaccine route.

Test Story

Description
The nurse documents administration route for the IM inactivated influenza vaccine as 'intranasal' - Is prevented from documenting "intranasal" for intramuscular inactivated influenza vaccine
Comments
This step covers data quality checking as an informative aspect of vaccine administration
Pre Condition
Order is placed for intramuscular inactivated influenza vaccine.
Post Condition
The intramuscular, inactivated influenza vaccination route has failed to be recorded as intranasal in the EMR.
Test Objectives
Record Vaccine Administration: The EHR or other clinical software system records information about each vaccine administered. The EHR records this information as structured data elements, including, at a minimum: date administered, administering clinician, site of administration (e.g., left arm), immunization type, product, lot number, manufacturer, Vaccine Information Statement date, and quantity of vaccine/dose size.
Sample of data quality checking for vaccine route.
Evaluation Criteria
The EMR prevents the user from entering 'Intranasal' as a route for the the intramuscular ,inactivated influenza vaccine.
Notes for Testers

- Documents all required information for the vaccine

Comments

No Comments

Pre Condition

Order is placed for inactivated influenza vaccine.

Post Condition

The inactivated influenza vaccinations is recorded in the EMR.

Test Objectives

Record Vaccine Administration: The EHR or other clinical software system records information about each vaccine administered. The EHR records this information as structured data elements, including, at a minimum: date administered, administering clinician, site of administration (e.g., left arm), immunization type, product, lot number, manufacturer, Vaccine Information Statement date, and quantity of vaccine/dose size.

Evaluation Criteria

The tester Verifies that there is a choice for VFC stock as she is VFC Eligible. The coded values are not expected to be displayed to the user, but it is expected that the value selected has the identified meaning, and it is expected that the system will use the coded value when the attribute is conveyed in later transactions:.

2.3. Juana Mariana Vazquez Transmit Immunization Report

Send the Immunization Report to the Immunization Registry (VXU/Z22) for Juana Mariana Vazquez.

Test Story

Description

Following the vaccinations given during the visit, the EMR transmits an Immunization report to the Immunization Registry using the VXU/Z22. The Vaccination report includes all newly administered vaccines. The report should include vaccines incorrectly recorded in the IIS. The report MAY send the immunizations that the EMR imported from the IIS.

Comments

The Report must include all newly administered vaccines in any order. The report should also include the corrected information where the EMR has different information than the IIS, and may also include the information imported from the IIS.

Pre Condition

The vaccines for the visit have been administered.

Post Condition

The IIS has received the vaccine information (Z22 message).

Test Objectives

Transmit Standard Patient Immunization History Report: The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries.

Identify Adverse Event: The EHR or other clinical software system enables capture of structured data regarding adverse events.

Notify Public Health Immunization Registry (IIS) of Update from Adverse Event: The EHR or other clinical software system notifies the public health immunization registry (IIS) of an update due to an adverse event.

Link Standard Codes to Immunization Data: The EHR or other clinical software system links standard codes to discrete data elements associated with an immunization.
a. NDC codes, CVX for immunizations

Evaluation Criteria

Evaluation criteria is defined within each test step.

Notes for Testers

Sending information updated in the EMR back to the registry is an advanced function and some registries will not accept updates.

2.3.1. Transmit the immunization report to the Immunization Registry

Test Step Type: SUT_INITIATOR

The EMR send the Immunization Report to the Immunization Registry (VXU/Z22) for updated vaccination information from the visit. This includes all newly administered vaccines and may include historical information updated in the EMR during the visit.

Test Story

Description

Following the vaccinations given during the visit, the EMR transmits an Immunization report to the Immunization Registry using the VXU/Z22. The Vaccination report includes all newly administered vaccines. The report should include vaccines incorrectly recorded in the IIS. The report MAY send the immunizations that the EMR imported from the IIS.

Comments

The Report must include all newly administered vaccines in any order. the report should also include the corrected information where the EMR has different information than the IIS, and may also include the information imported from the IIS.

Pre Condition

The vaccines for the visit have been administered.

Post Condition

The Immunization Report has been transmitted to the IIS using a valid Z22 VXU in accordance with the test data correctly and without omission.

Test Objectives

Transmit Standard Patient Immunization History Report: The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries.

Link Standard Codes to Immunization Data: The EHR or other clinical software system links standard codes to discrete data elements associated with an immunization.
a. NDC codes, CVX for immunizations

Evaluation Criteria

The VXU/Z22 message passes validation using the NIST Immunization VXU Validation Tool (Z22) (context-free). The content of the message correctly reflects the test data (context-based) in accordance with the Test Data Specification and the Message Content.

Notes for Testers

Sending information updated in the EMR back to the registry is an advanced function and some registries will not accept updates.

2.3.2. Receive ACK Z23 from Immunization Registry

Test Step Type: TA_RESPONDER

The Immunization Registry returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.

Test Story

Description
The Immunization Registry returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.
Comments
No Comments
Pre Condition
A VXU message is generated by the EHR.
Post Condition
The ACK Z23 is received by the EHR.
Test Objectives
<i>Transmit Standard Patient Immunization History Report:</i> The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries.
Evaluation Criteria
The acknowledgement message is consumed by the system responsible for the content of the administration message without error. This is not typically part of the user interface, so this may be demonstrated through back-end evidence.
Notes for Testers
Important note regarding the MSH-10 and MSA-2: The NIST acknowledgment message is predefined and is based on the VXU message. Most systems will automatically create the message control Identifier and may require it for importing, linking, and processing the ACK message. The NIST ACK test message can be modified such that MSA-2 matches MSH-10 of the VXU message generated by the system-under test.

Juror Comments		

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the EHR technology's ability to display required core data elements from the information received in the Evaluated Immunization History and Immunization Forecast Z42 response message. Additional data from the message or from the EHR are permitted to be displayed by the EHR. Grayed-out fields in the Juror Document indicate where no data for the data element indicated were included in the Z42 message for the given Test Case.

The format of this Juror Document is for ease-of-use by the Tester and does not indicate how the EHR display must be designed.

The Evaluated Immunization History and Immunization Forecast data shown in this Juror Document are derived from the Z42 message provided with the given Test Case; equivalent data are permitted to be displayed by the EHR. The column headings are meant to convey the kind of data to be displayed; equivalent labels/column headings are permitted to be displayed by the EHR.

Patient Information		
Element Name	Data	Tester Comment
When displayed in the EHR with the Evaluated Immunization History and Immunization Forecast, these patient demographics data may be derived from either the received immunization message or the EHR patient record. When displaying demographics from the patient record, the EHR must be able to demonstrate a linkage between the demographics in the message (primarily the patient ID in PID-3.1) and the patient record used for display to ensure that the message was associated with the appropriate patient.		

2.3.3. Record an adverse reaction

Test Step Type: SUT MANUAL

The Provider records in the EMR an adverse reaction of rash within 14 days of dose.

Test Story

Description
Following the vaccine administration, the mother reports that the patient had a rash within 14 days of dose.
Comments
No Comments
Pre Condition
The vaccinations for the visit have been administered.
Post Condition
The adverse reaction to the Influenza vaccination of rash within 14 days of dose is recorded in the EMR.
Test Objectives
<i>Identify Adverse Event:</i> The EHR or other clinical software system enables capture of structured data regarding adverse events.
Support for:
<i>Notify Public Health Immunization Registry (IIS) of Update from Adverse Event:</i> The EHR or other clinical software system notifies the public health immunization registry (IIS) of an update due to an adverse event.
Evaluation Criteria
Verify that vendor can record the adverse reaction to the Influenza vaccination of rash within 14 days of dose correctly and without omission (VXC14). The coded value is not expected to be displayed to the user, but it is expected that the value selected has the identified meaning, and it is expected that the system will use the coded value when the attribute is conveyed in later transactions.
Notes for Testers

2.3.4. Transmit the updated vaccination report with adverse reaction to the registry

Test Step Type: SUT_INITIATOR

The EMR generates a Z22 Send Unsolicited Immunization Update Using a VXU correctly and without omission according to supplied test data.

Test Story

Description
The adverse reaction to the Influenza vaccination of rash within 14 days of dose is reported to the Immunization Registry using a Z22/VXU message.
Comments
No Comments
Pre Condition
An adverse reaction to the Influenza vaccination of rash within 14 days of dose is recorded in the EMR.
Post Condition
The adverse reaction has been transmitted to the IIS.
Test Objectives
<i>Transmit Standard Patient Immunization History Report:</i> The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries.
<i>Identify Adverse Event:</i> The EHR or other clinical software system enables capture of structured data regarding adverse events.
<i>Notify Public Health Immunization Registry (IIS) of Update from Adverse Event:</i> The EHR or other clinical software system notifies the public health immunization registry (IIS) of an update due to an adverse event.
<i>Link Standard Codes to Immunization Data:</i> The EHR or other clinical software system links standard codes to discrete data elements associated with an immunization. a. NDC codes, CVX for immunizations
Evaluation Criteria
The VXU/Z22 message passes validation using the NIST Immunization VXU Validation Tool (Z22) (context-free). The content of the message correctly reflects the test data (context-based) in accordance with the Test Data Specification and the Message Content.
Notes for Testers
The tester verifies that the message includes 'U' in RXA 21 for the Influenza vaccine.

2.3.5. Receive ACK Z23 from Immunization Registry for Updated Transmission

Test Step Type: TA_RESPONDER

The Immunization Registry returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.

Test Story

Description
The Immunization Registry returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.
Comments
No Comments
Pre Condition
A VXU message is generated by the EHR.
Post Condition
The ACK Z23 is received by the EHR.
Test Objectives
Transmit Standard Patient Immunization History Report: The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries.
Evaluation Criteria
The acknowledgement message is consumed by the system responsible for the content of the administration message without error. This is not typically part of the user interface, so this may be demonstrated through back-end evidence.
Notes for Testers
Important note regarding the MSH-10 and MSA-2: The NIST acknowledgment message is predefined and is based on the VXU message. Most systems will automatically create the message control Identifier and may require it for importing, linking, and processing the ACK message. The NIST ACK test message can be modified such that MSA-2 matches MSH-10 of the VXU message generated by the system-under test.

Notes for Testers

If the same immunization report verified in TestCase 4 for Juana Mariana Gonzales is used for the patient access to the immunization record, then content verification does not need to be repeated.

3. Juan Marcel Marina Visit

Juan Marcel Marina visits the provider where his immunization history is retrieved from the registry and reconciled with the local information in the medical record to determine vaccines that are due. Vaccinations are ordered and administered. The vaccines are reported to the immunization registry and a vaccine summary is available for the patient.

3.1. Query the Registry for Juan Marcel Marina

EMR Generates a Z44 query to the Immunization Registry to retrieve the Evaluated History and Forecast for Juan Marcel Marina.

Test Story

Description
The EMR Generates a Z44 query to the Immunization Registry to retrieve the Evaluated History and Forecast for Juan Marcel Marina. Querying the registry will consist of the vendor creating Z44 messages for Juan Marcel Marina to be sent to the registry. The response will be processed as part of the 'Display, Reconcile, Import and Update Immunization Information' activity.
Using the Z42 Response to Immunization Registry Query, the EMR displays the Evaluated History and Forecast to the user for reconciliation and update. The vendor will receive information back from the registry and show the ability to view and reconcile, and import the information returned by the registry (NOTE: the Z42 message will be provided either manually, or as part of the tool). This test will also look at the system's ability to view the forecast returned by the registry, and create a new forecast after reconciling the information.
Comments
No Comments
Pre Condition
Juan Marcel Marina is entered as a patient in the EMR with complete Demographic data, Immunization History Data, and Clinical Data according to the steps in the 'Juan Marcel Marina Initial Data Load'
Post Condition
A Z44 Query is generated and submitted to the Immunization Registry/Test tool, and a Z42 response is returned .
Test Objectives
Select New Patient: The system must allow a user to enter distinguishing information about patients so that providers can uniquely identify patients who have similar sounding names or other similar identifying information. For example, twins living in the same household will have similar dates of birth, addresses, and may have similar names. EHRs or other clinical software must be able to store information to successfully match with patients in immunization registries, if the information is available. The information includes the mother's maiden name, whether the patient was part of a multiple birth, and the order of the multiple birth. This information allows the provider to correctly identify the patient and also helps assure a match when the EHR send the patient's information to external systems such as an immunization registry.
Real Time Request/Receive Patient Immunization History: The system sends a request to the public health immunization registry "on demand" (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (QBP/RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).
Request/Receive Patient Immunization Data and Identify Source: The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.
View Reconciled Immunization Forecast: The EHR or other clinical software system has the ability to re-evaluate and update the immunization forecast using a patient's newly updated immunization history, where the updated forecast results from the reconciliation of immunization data contained in the public health immunization registry with immunization data contained in the EHR. Processing the new forecast can be internal to the EHR or it can use an external forecasting service.
Review Patient Immunization History: To assist with the ordering process, the EHR or other clinical software system allows a user to specify standard views of patient immunization information for each vaccine dose administration, including patient-specific data (e.g., age on dates of administration, etc.).
Support for:
Receive Dose Not Indicated Alert for Single Vaccine Order: The EHR or other clinical software system notifies the provider in instances when there are single or combination vaccine orders that are inconsistent with the expected timing intervals included in the vaccine forecast. Inconsistencies include suggestion of different date(s) for ordering the vaccine(s) or indication the vaccine(s) is/are no longer required.
Evaluation Criteria
Evaluation criteria is defined within each test step.

Post Condition Juan Marcel Marina is the active working patient in the EMR.
Test Objectives Select New Patient: The system must allow a user to enter distinguishing information about patients so that providers can uniquely identify patients who have similar sounding names or other similar identifying information. For example, twins living in the same household will have similar dates of birth, addresses, and may have similar names. EHRs or other clinical software must be able to store information to successfully match with patients in immunization registries, if the information is available. The information includes the mother's maiden name, whether the patient was part of a multiple birth, and the order of the multiple birth. This information allows the provider to correctly identify the patient and also helps assure a match when the EHR send the patient's information to external systems such as an immunization registry.

3.1.3. View and import response to request for vaccination history for Juan Marcel Marina

Test Step Type: TA_RESPONDER

The EMR displays the Immunization History results (Z42) returned in response to the Z44 Query and import them into the EMR

Test Story

Description

The physician accesses the record for Juan Marcel Marina and:

- Accepts the vaccines provided by the registry as this is a new patient and there are no prior vaccines recorded
- Views the registry history including the second dose of Hepatitis B vaccine given late (at 2 years of age) and no history of a third dose; influenza vaccine was also not given since 2015

Comments

There is no reconciliation step as there are no historical immunizations in the EMR. All will be imported from the Z42 response.

Pre Condition

A Z44 query has been submitted to the Immunization Registry and a Z42 response is provided back to the EMR and the response is available in the EMR for reconciliation and import.

Post Condition

Evaluated Immunization History returned from the registry is reconciled and imported into the patient record (Juan Marcel Marina)

Test Objectives

Real Time Request/Receive Patient Immunization History: The system sends a request to the public health immunization registry "on demand" (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).

Request/Receive Patient Immunization Data and Identify Source: The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.

Compare Public Health Immunization Registry (IIS) Immunization History to EHR Immunization History: The public health immunization registry has returned the requested immunization history for a patient. The EHR is able to display the immunization history received from the registry as well as the immunization history already present in the EHR so that a user can compare them. The EHR provides a way for the provider to view both histories, determine what is different (if anything), and update the existing EHR immunization history with new information from the public health registry if he or she chooses to do so. The system must store the new information as structured data as part of the patient's local immunization history and include the time of the update and the source of the new information.

Review Patient Immunization History: To assist with the ordering process, the EHR or other clinical software system allows a user to specify standard views of patient immunization information for each vaccine dose administration, including patient-specific data (e.g., age on dates of administration, etc.).

Supporting data for:

Receive Dose Not Indicated Alert for Single Vaccine Order: The EHR or other clinical software system notifies the provider in instances when there are single or combination vaccine orders that are inconsistent with the expected timing intervals included in the vaccine forecast. Inconsistencies include suggestion of different date(s) for ordering the vaccine(s) or indication the vaccine(s) is/are no longer required.

Evaluation Criteria

DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the EHR technology's ability to display required core data elements from the information received in the Evaluated Immunization History and Immunization Forecast Z42 response message. Additional data from the message or from the EHR are permitted to be displayed by the EHR. Grayed-out fields in the Juror Document indicate where no data for the data element indicated were included in the Z42 message for the given Test Case.

The format of this Juror Document is for ease-of-use by the Tester and does not indicate how the EHR display must be designed.

The Evaluated Immunization History and Immunization Forecast data shown in this Juror Document are derived from the Z42 message provided with the given Test Case; equivalent data are permitted to be displayed by the EHR. The column headings are meant to convey the kind of data to be displayed; equivalent labels/column headings are permitted to be displayed by the EHR.

When displayed in the EHR with the Evaluated Immunization History and Immunization Forecast, these patient demographics data may be derived from either the received immunization message or the EHR patient record. When displaying demographics from the patient record, the EHR must be able to demonstrate a linkage between the demographics in the message (primarily the patient ID in PID-3.1) and the patient record used for display to ensure that the message was associated with the appropriate patient.

3.3.2. Receive ACK Z23 from Immunization Registry

Test Step Type: TA_RESPONDER

The Immunization Registry returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.

Test Story

Description
The Immunization Registry returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.
Comments
No Comments
Pre Condition
A VXU message is generated by the EHR.
Post Condition
The ACK Z23 is received by the EHR.
Test Objectives
Transmit Standard Patient Immunization History Report: The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries.
Evaluation Criteria
The acknowledgement message is consumed by the system responsible for the content of the administration message without error.
Notes for Testers
Important note regarding the MSH-10 and MSA-2: The NIST acknowledgment message is predefined and is based on the VXU message. Most systems will automatically create the message control Identifier and may require it for importing, linking, and processing the ACK message. The NIST ACK test message can be modified such that MSA-2 matches MSH-10 of the VXU message generated by the system-under test.

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the EHR technology's ability to display required core data elements from the information received in the Evaluated Immunization History and Immunization Forecast Z42 response message. Additional data from the message or from the EHR are permitted to be displayed by the EHR. Grayed-out fields in the Juror Document indicate where no data for the data element indicated were included in the Z42 message for the given Test Case.

The format of this Juror Document is for ease-of-use by the Tester and does not indicate how the EHR display must be designed.

The Evaluated Immunization History and Immunization Forecast data shown in this Juror Document are derived from the Z42 message provided with the given Test Case; equivalent data are permitted to be displayed by the EHR. The column headings are meant to convey the kind of data to be displayed; equivalent labels/column headings are permitted to be displayed by the EHR.

Patient Information		
Element Name	Data	Tester Comment
When displayed in the EHR with the Evaluated Immunization History and Immunization Forecast, these patient demographics data may be derived from either the received immunization message or the EHR patient record. When displaying demographics from the patient record, the EHR must be able to demonstrate a linkage between the demographics in the message (primarily the patient ID in PID-3.1) and the patient record used for display to ensure that the message was associated with the appropriate patient.		

3.3.3. Transmit Delete from Bad Lot

Test Step Type: SUT_INITIATOR

The Provider receives notification that the Hepatitis B vaccine lot 6352FK2 has been identified as a bad lot. A delete notification for the Hepatitis B vaccination administered is transmitted to the Immunization Registry.

Test Story

Description
Following the vaccine administration of Hepatitis B, the provider receives notification that the Hepatitis B vaccine lot 6352FK2 has been identified as a bad lot. A delete notification for the Hepatitis B vaccination administered is transmitted to the Immunization Registry for Juan Marcel Marina.
Comments
No Comments
Pre Condition
The vaccinations for the visit have been administered. The vaccination report (Z22) has been transmitted to the IIS, including the record of the Hepatitis B vaccination with lot 6352FK2.
Post Condition
The EMR has recorded that the hepatitis B vaccination was from a bad lot. Juan Marcel Marina's record is updated to reflect that the immunization given with lot 6352FK2 is invalid. The Delete notification for this vaccination has been transmitted to the Immunization Registry.
Test Objectives
Transmit Standard Patient Immunization History Report: The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries.
Link Standard Codes to Immunization Data: The EHR or other clinical software system links standard codes to discrete data elements associated with an immunization. a. NDC codes, CVX for immunizations
Support for delete functionality.
Evaluation Criteria
Verify that EMR can record the bad lot. Verify that the vaccination record for Juan Marcel Marina for the Hepatitis B vaccination given with lot 6352FK2 is marked as invalid. Verify that a valid Delete notification is transmitted to the Immunization Registry for this vaccination: The VXU/Z22 message passes validation using the NIST Immunization VXU Validation Tool (Z22) (context-free). The content of the message correctly reflects the test data (context-based) in accordance with the Test Data Specification and the Message Content.

3.3.4. Receive ACK Z23 from Immunization Registry

Test Step Type: TA_RESPONDER

The Immunization Registry returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.

Test Story

Description
The Immunization Registry returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.
Comments
No Comments
Pre Condition
A VXU message is generated by the EHR.
Post Condition
The ACK Z23 is received by the EHR.
Test Objectives
Transmit Standard Patient Immunization History Report: The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries.
Evaluation Criteria
The acknowledgement message is consumed by the system responsible for the content of the administration message without error.
Notes for Testers
Important note regarding the MSH-10 and MSA-2: The NIST acknowledgment message is predefined and is based on the VXU message. Most systems will automatically create the message control Identifier and may require it for importing, linking, and processing the ACK message. The NIST ACK test message can be modified such that MSA-2 matches MSH-10 of the VXU message generated by the system-under test.

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the EHR technology's ability to display required core data elements from the information received in the Evaluated Immunization History and Immunization Forecast Z42 response message. Additional data from the message or from the EHR are permitted to be displayed by the EHR. Grayed-out fields in the Juror Document indicate where no data for the data element indicated were included in the Z42 message for the given Test Case.

The format of this Juror Document is for ease-of-use by the Tester and does not indicate how the EHR display must be designed.

The Evaluated Immunization History and Immunization Forecast data shown in this Juror Document are derived from the Z42 message provided with the given Test Case; equivalent data are permitted to be displayed by the EHR. The column headings are meant to convey the kind of data to be displayed; equivalent labels/column headings are permitted to be displayed by the EHR.

Patient Information		
Element Name	Data	Tester Comment
When displayed in the EHR with the Evaluated Immunization History and Immunization Forecast, these patient demographics data may be derived from either the received immunization message or the EHR patient record. When displaying demographics from the patient record, the EHR must be able to demonstrate a linkage between the demographics in the message (primarily the patient ID in PID-3.1) and the patient record used for display to ensure that the message was associated with the appropriate patient.		

4. Juana Mariela Gonzales Morales Visit

Infant twin, Juana Mariela Gonzales Morales visits the provider where her immunization history is retrieved from the registry and reconciled with the local information in the medical record to determine vaccines that are due. Vaccinations are ordered and administered. The vaccines are reported to the immunization registry and a vaccine summary is available for the patient.

4.1. Query the Registry for Juana Mariela Gonzales Morales

EMR Generates a Z44 query to the Immunization Registry to retrieve the Evaluated History and Forecast for Juana Mariela Gonzales Morales.

Test Story

Description

The EMR Generates a Z44 query to the Immunization Registry to retrieve the Evaluated History and Forecast for Juana Mariela Gonzales Morales. Querying the registry will consist of the vendor creating Z44 messages for Juana Mariela Gonzales Morales to be sent to the registry. The response will be processed as part of the 'Display, Reconcile, Import and Update Immunization Information' activity.

Using the Z42 Response to Immunization Registry Query, the EMR displays the Evaluated History and Forecast to the user for reconciliation and update. The vendor will receive information back from the registry and show the ability to view and reconcile, and import the information returned by the registry (NOTE: the Z42 message will be provided either manually, or as part of the tool). This test will also look at the system's ability to view the forecast returned by the registry, and create a new forecast after reconciling the information.

Comments

No Comments

Pre Condition

Juana Mariela Gonzales Morales is entered as a patient in the EMR with complete Demographic data, Immunization History Data, and Clinical Data according to the steps in the 'Juana Mariela Gonzales Morales Initial Data Load'

Post Condition

A Z44 Query is generated and submitted to the Immunization Registry/Test tool, and a Z42 response is returned.

Test Objectives

Select New Patient: The system must allow a user to enter distinguishing information about patients so that providers can uniquely identify patients who have similar sounding names or other similar identifying information. For example, twins living in the same household will have similar dates of birth, addresses, and may have similar names. EHRs or other clinical software must be able to store information to successfully match with patients in immunization registries, if the information is available. The information includes the mother's maiden name, whether the patient was part of a multiple birth, and the order of the multiple birth. This information allows the provider to correctly identify the patient and also helps assure a match when the EHR send the patient's information to external systems such as an immunization registry.

Real Time Request/Receive Patient Immunization History: The system sends a request to the public health immunization registry "on demand" (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (QBP/RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).

Request/Receive Patient Immunization Data and Identity Source: The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.

View Reconciled Immunization Forecast: The EHR or other clinical software system has the ability to re-evaluate and update the immunization forecast using a patient's newly updated immunization history, where the updated forecast results from the reconciliation of immunization data contained in the public health immunization registry with immunization data contained in the EHR. Processing the new forecast can be internal to the EHR or it can use an external forecasting service.

Evaluation Criteria

Evaluation criteria is defined within each test step.

4.1.3. View and import response to request for vaccination history for Juana Mariela Gonzales Morales

Test Step Type: TA_RESPONDER

The EMR displays the Immunization History results (Z42) returned in response to the Z44 Query and import them into the EMR.

Test Story

Description

The physician accesses the record for Juana Mariela Gonzales Morales and:

- Accepts the single vaccine in the registry record into the EHR history

Comments

There is no reconciliation step as there are no historical immunizations in the EMR. All will be imported from the Z42 response.

Pre Condition

A Z44 query has been submitted to the Immunization Registry and a Z42 response is provided back to the EMR and the response is available in the EMR for reconciliation and import.

Post Condition

Evaluated Immunization History returned from the registry is reconciled and imported into the patient record (Juana Mariela Gonzales Morales)

Test Objectives

Request/Receive Patient Immunization Data and Identify Source: The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.

Real Time Request/Receive Patient Immunization History: The system sends a request to the public health immunization registry "on demand" (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).

Evaluation Criteria

1. The EMR displays the information returned from the Immunization Registry according to the Juror Document.

2. The user imports returned vaccinations as follows:

a. Vaccinations Imported:

hepatitis B vaccine, pediatric or pediatric/adolescent dosage (CVX 08) administered 10/1/2016

Notes for Testers

If the EMR is unable to match and import the previous immunization record, they will need to add the following historical immunization manually:

DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the EHR technology's ability to display required core data elements from the information received in the Evaluated Immunization History and Immunization Forecast Z42 response message. Additional data from the message or from the EHR are permitted to be displayed by the EHR. Grayed-out fields in the Juror Document indicate where no data for the data element indicated were included in the Z42 message for the given Test Case.

The format of this Juror Document is for ease-of-use by the Tester and does not indicate how the EHR display must be designed.

The Evaluated Immunization History and Immunization Forecast data shown in this Juror Document are derived from the Z42 message provided with the given Test Case; equivalent data are permitted to be displayed by the EHR. The column headings are meant to convey the kind of data to be displayed; equivalent labels/column headings are permitted to be displayed by the EHR.

4.3.2. Receive ACK Z23 from Immunization Registry

Test Step Type: TA_RESPONDER

The Immunization Registry returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.

Test Story

Description
The Immunization Registry returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.
Comments
No Comments
Pre Condition
A VXU message is generated by the EHR.
Post Condition
The ACK Z23 is received by the EHR.
Test Objectives
No Test Objectives
Evaluation Criteria
The acknowledgement message is consumed by the system responsible for the content of the administration message without error.
Notes for Testers
Important note regarding the MSH-10 and MSA-2: The NIST acknowledgment message is predefined and is based on the VXU message. Most systems will automatically create the message control Identifier and may require it for importing, linking, and processing the ACK message. The NIST ACK test message can be modified such that MSA-2 matches MSH-10 of the VXU message generated by the system-under test.

Juror Comments		

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the EHR technology's ability to display required core data elements from the information received in the Evaluated Immunization History and Immunization Forecast Z42 response message. Additional data from the message or from the EHR are permitted to be displayed by the EHR. Grayed-out fields in the Juror Document indicate where no data for the data element indicated were included in the Z42 message for the given Test Case.

The format of this Juror Document is for ease-of-use by the Tester and does not indicate how the EHR display must be designed.

The Evaluated Immunization History and Immunization Forecast data shown in this Juror Document are derived from the Z42 message provided with the given Test Case; equivalent data are permitted to be displayed by the EHR. The column headings are meant to convey the kind of data to be displayed; equivalent labels/column headings are permitted to be displayed by the EHR.

Patient Information		
Element Name	Data	Tester Comment
When displayed in the EHR with the Evaluated Immunization History and Immunization Forecast, these patient demographics data may be derived from either the received immunization message or the EHR patient record. When displaying demographics from the patient record, the EHR must be able to demonstrate a linkage between the demographics in the message (primarily the patient ID in PID-3.1) and the patient record used for display to ensure that the message was associated with the appropriate patient.		

5. Juana Maria Gonzales Morales Visit

Infant twin, Juana Maria Gonzales Morales visits the provider where her immunization history is retrieved from the registry and reconciled with the local information in the medical record to determine vaccines that are due. Vaccinations are ordered and administered. The vaccines are reported to the immunization registry and a vaccine summary is available for the patient.

5.1. Query the Registry for Juana Maria Gonzales Morales.

EMR Generates a Z44 query to the Immunization Registry to retrieve the Evaluated History and Forecast for Juana Maria Gonzales Morales

Test Story

Description
The EMR Generates a Z44 query to the Immunization Registry to retrieve the Evaluated History and Forecast for Juana Maria Gonzales Morales. Querying the registry will consist of the vendor creating Z44 messages for Juana Maria Gonzales Morales to be sent to the registry. The response will be processed as part of the 'Display, Reconcile, Import and Update Immunization Information' activity.
Using the Z42 Response to Immunization Registry Query, the EMR displays the Evaluated History and Forecast to the user for reconciliation and update. The vendor will receive information back from the registry and show the ability to view and reconcile, and import the information returned by the registry (NOTE: the Z42 message will be provided either manually, or as part of the tool). This test will also look at the system's ability to view the forecast returned by the registry, and create a new forecast after reconciling the information.
Comments
No Comments
Pre Condition
Mariela Gonzales Morales is entered as a patient in the EMR with complete Demographic data, Immunization History Data, and Clinical Data according to the steps in the Mariela Gonzales Morales Initial Data Load'
Post Condition
A Z44 Query is generated and submitted to the Immunization Registry/Test tool, and a Z42 response is returned.
Test Objectives
Select New Patient: The system must allow a user to enter distinguishing information about patients so that providers can uniquely identify patients who have similar sounding names or other similar identifying information. For example, twins living in the same household will have similar dates of birth, addresses, and may have similar names. EHRs or other clinical software must be able to store information to successfully match with patients in immunization registries, if the information is available. The information includes the mother's maiden name, whether the patient was part of a multiple birth, and the order of the multiple birth. This information allows the provider to correctly identify the patient and also helps assure a match when the EHR send the patient's information to external systems such as an immunization registry.
Real Time Request/Receive Patient Immunization History: The system sends a request to the public health immunization registry "on demand" (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (QBP/RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).
Request/Receive Patient Immunization Data and Identify Source: The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.
View Reconciled Immunization Forecast: The EHR or other clinical software system has the ability to re-evaluate and update the immunization forecast using a patient's newly updated immunization history, where the updated forecast results from the reconciliation of immunization data contained in the public health immunization registry with immunization data contained in the EHR. Processing the new forecast can be internal to the EHR or it can use an external forecasting service.
Evaluation Criteria
Evaluation criteria is defined within each test step.

5.1.1. Select Patient Juana Maria Gonzales Morales

Test Step Type: SUT MANUAL

Select patient Juana Maria Gonzales Morales, Infant Twin, distinguishing the patient from other patients with similar demographics (twins).

Test Story

Description

Juana Maria Gonzales Morales is selected as the patient and her record is opened in the EMR.

Comments

No Comments

Pre Condition

Juana Maria Gonzales Morales Initial Data Load completed.

Post Condition

Juana Maria Gonzales Morales is the active working patient in the EMR.

Test Objectives

Select New Patient: The system must allow a user to enter distinguishing information about patients so that providers can uniquely identify patients who have similar sounding names or other similar identifying information. For example, twins living in the same household will have similar dates of birth, addresses, and may have similar names. EHRs or other clinical software must be able to store information to successfully match with patients in immunization registries, if the information is available. The information includes the mother's maiden name, whether the patient was part of a multiple birth, and the order of the multiple birth. This information allows the provider to correctly identify the patient and also helps assure a match when the EHR send the patient's information to external systems such as an immunization registry.

Evaluation Criteria

Tester shall verify that the product can distinguish Juana Maria Gonzales Morales from similar sounding names and her twin using all of the pediatric demographics:

5.1.2. Query Registry for vaccination history and forecast too many matches found response

Test Step Type: SUT_INITIATOR

Vendor SHALL be able to Generate a Z44 Query correctly and without omission according to supplied test data

Test Story

Description

The provider uses the EMR to query the Immunization Registry for an Evaluated History and Forecast based on information known to the Immunization Registry. This query will result in an error that too many matches are found.

Comments

While the query is identical, the response to this step will be that no persons are found. No demographic changes are requested for this step as the error trigger is specific to the test step.

Pre Condition

Juana Maria Gonzales Morales Initial Data Load is completed.

Juana Maria Gonzales Morales is the active working patient in the EMR.

Post Condition

The Immunization Registry responds with Evaluated Vaccine History and Forecast for Juana Maria Gonzales Morales.

Test Objectives

Real Time Request/Receive Patient Immunization History: The system sends a request to the public health immunization registry "on demand" (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (QBP/RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).

Setup step to test error handling: Test the capability of the EHR-S to process a response message that returns no persons found and to provide an indication to the end user.

Evaluation Criteria

Tester shall verify that the vendor can produce a valid Z44 query in accordance with the test data correctly and without omission.

Tester shall verify that the data in the message corresponds to the data in the EMR and contains all test data attributes supplied.

5.1.3. Error Handling - Too many matches found

Test Step Type: SUT_INITIATOR

The EMR receives a response from the registry query that too many persons are found. The EMR notifies the user/clinician.

Test Story

Description
The EMR processes notifies the user that there were too many matches found in response to the query the Immunization Registry for an Evaluated History and Forecast.
Comments
The sending (querying) system will need to accept a response indicating that too many matches were found.
Pre Condition
A Z44 query has been submitted to the Immunization Registry and a Z42 response is provided back to the EMR and the response is available in the EMR for reconciliation and import.
Post Condition
The Immunization Registry responds with a message indicating too many matches are found. The EMR has notified the user.
Test Objectives
Real Time Request/Receive Patient Immunization History: The system sends a request to the public health immunization registry "on demand" (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).
Tests error handling: Test the capability of the EHR-S to process a response message that returns too many matches found and to provide an indication to the end user.
Evaluation Criteria
The tester verifies that the user/clinician is notified of no match.
The EHR shall display a notification indicating that the query for an Evaluated Immunization History and Immunization Forecast is complete but no matching records were found for the person in the query.

DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the EHR technology's ability to display required core data elements from the information received in the Evaluated Immunization History and Immunization Forecast Z42 response message. Additional data from the message or from the EHR are permitted to be displayed by the EHR. Grayed-out fields in the Juror Document indicate where no data for the data element indicated were included in the Z42 message for the given Test Case.

The format of this Juror Document is for ease-of-use by the Tester and does not indicate how the EHR display must be designed.

The Evaluated Immunization History and Immunization Forecast data shown in this Juror Document are derived from the Z42 message provided with the given Test Case; equivalent data are permitted to be displayed by the EHR. The column headings are meant to convey the kind of data to be displayed; equivalent labels/column headings are permitted to be displayed by the EHR.

Patient Information

Element Name	Data	Tester Comment
When displayed in the EHR with the Evaluated Immunization History and Immunization Forecast, these patient demographics data may be derived from either the received immunization message or the EHR patient record. When displaying demographics from the patient record, the EHR must be able to demonstrate a linkage between the demographics in the message (primarily the patient ID in PID-3.1) and the patient record used for display to ensure that the message was associated with the appropriate patient.		

5.1.4. Query Registry for vaccination history and forecast no persons found response

Test Step Type: SUT_INITIATOR

Vendor SHALL be able to Generate a Z44 Query correctly and without omission according to supplied test data

Test Story

Description

The provider uses the EMR to query the Immunization Registry for an Evaluated History and Forecast based on information known to the Immunization Registry. This query will result in an error that no persons are found.

Comments

This step is a repeat of Step 2: Query Registry for vaccination history and forecast for Juana Maria Gonzales Morales in order to set up the error-checking response for 'No Persons Found'.

While the query is identical, the response to this step will be that no persons are found. No demographic changes are requested for this step as the error trigger is specific to the test step.

Pre Condition

Juana Maria Gonzales Morales Initial Data Load is completed.

Juana Maria Gonzales Morales is the active working patient in the EMR.

Post Condition

The Immunization Registry responds with Evaluated Vaccine History and Forecast for Juana Maria Gonzales Morales.

Test Objectives

Real Time Request/Receive Patient Immunization History: The system sends a request to the public health immunization registry "on demand" (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (QBP/RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).

Tests error handling: Test the capability of the EHR-S to process a response message that returns no persons found and to provide an indication to the end user.

Evaluation Criteria

Tester verifies that the message has been created and submitted in the test plan to trigger the error handling response in the next step.

Notes for Testers

Query step is the same as Step 2: Query Registry for vaccination history and forecast for Juana Maria Gonzales Morales. No new requirements tested

5.1.5. Error Handling - No persons found

Test Step Type: SUT_INITIATOR

The EMR receives a response from the registry query that no persons are found. The EMR notifies the user/clinician.

Test Story

Description
The EMR processes notifies the user that there were no persons found in response to the query the Immunization Registry for an Evaluated History and Forecast.
Comments
The sending (querying) system will need to accept a response indicating that no matches were found.
Pre Condition
A Z44 query has been submitted to the Immunization Registry and a Z42 response is provided back to the EMR.and the response is available in the EMR for reconciliation and import.
Post Condition
The Immunization Registry responds with a message is indicating no person record is found. The EMR has notified the user.
Test Objectives
Real Time Request/Receive Patient Immunization History: The system sends a request to the public health immunization registry "on demand" (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).
Tests error handling: Test the capability of the EHR-S to process a response message that returns no persons found and to provide an indication to the end user.
Evaluation Criteria
The tester verifies that the user/clinician is notified of no match.
The EHR shall display a notification indicating that the query for an Evaluated Immunization History and Immunization Forecast is complete but no matching records were found for the person in the query.

DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the EHR technology's ability to display required core data elements from the information received in the Evaluated Immunization History and Immunization Forecast Z42 response message. Additional data from the message or from the EHR are permitted to be displayed by the EHR. Grayed-out fields in the Juror Document indicate where no data for the data element indicated were included in the Z42 message for the given Test Case.

The format of this Juror Document is for ease-of-use by the Tester and does not indicate how the EHR display must be designed.

The Evaluated Immunization History and Immunization Forecast data shown in this Juror Document are derived from the Z42 message provided with the given Test Case; equivalent data are permitted to be displayed by the EHR. The column headings are meant to convey the kind of data to be displayed; equivalent labels/column headings are permitted to be displayed by the EHR.

Patient Information

Element Name	Data	Tester Comment
---------------------	-------------	-----------------------

When displayed in the EHR with the Evaluated Immunization History and Immunization Forecast, these patient demographics data may be derived from either the received immunization message or the EHR patient record. When displaying demographics from the patient record, the EHR must be able to demonstrate a linkage between the demographics in the message (primarily the patient ID in PID-3.1) and the patient record used for display to ensure that the message was associated with the appropriate patient.

5.1.6. Query Registry for vaccination history and forecast for Juana Maria Gonzales Morales

Test Step Type: SUT_INITIATOR

Vendor SHALL be able to Generate a Z44 Query correctly and without omission according to supplied test data

Test Story

Description The provider uses the EMR to query the Immunization Registry for an Evaluated History and Forecast based on information known to the Immunization Registry.
Comments This step is a repeat of Step 2: Query Registry for vaccination history and forecast for Juana Maria Gonzales Morales in order to set up the response for the history and forecast that will be imported in the following step.
Pre Condition Juana Maria Gonzales Morales Initial Data Load is completed. Juana Maria Gonzales Morales is the active working patient in the EMR.
Post Condition The Immunization Registry responds with Evaluated Vaccine History and Forecast for Juana Maria Gonzales Morales.
Test Objectives Real Time Request/Receive Patient Immunization History: The system sends a request to the public health immunization registry "on demand" (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (QBP/RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5). Request/Receive Patient Immunization Data and Identity Source: The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.
Evaluation Criteria Tester verifies that the message has been created and submitted in the test plan to trigger the error handling response in the next step.
Notes for Testers Query step is the same as Step 2: Query Registry for vaccination history and forecast for Juana Maria Gonzales Morales. No new requirements tested

5.1.7. View and import response to request for vaccination history for Juana Maria Gonzales Morales

Test Step Type: TA_RESPONDER

The EMR displays the Immunization History results (Z42) returned in response to the Z44 Query and import them into the EMR.

Test Story

Description

The physician accesses the record for Juana Maria Gonzales Morales and:

- Accepts the single vaccine in the registry record into the EHR history

Comments

There is no reconciliation step as there are no historical immunizations in the EMR. All will be imported from the Z42 response.

Pre Condition

A Z44 query has been submitted to the Immunization Registry and a Z42 response is provided back to the EMR and the response is available in the EMR for reconciliation and import.

Post Condition

Evaluated Immunization History returned from the registry is reconciled and imported into the patient record (Juana Maria Gonzales Morales)

Test Objectives

Request/Receive Patient Immunization Data and Identify Source: The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.

Real Time Request/Receive Patient Immunization History: The system sends a request to the public health immunization registry "on demand" (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).

Evaluation Criteria

1. The EMR displays the information returned from the Immunization Registry according to the Juror Document.

2. The user imports returned vaccinations as follows:

a. Vaccinations Imported:

hepatitis B vaccine, pediatric or pediatric/adolescent dosage (CVX 08) administered 10/1/2016

Notes for Testers

If the EMR is unable to match and import the previous immunization record, they will need to add the following historical immunization manually. The coded values are not expected to be displayed to the user, but it is expected that the value selected has the identified meaning, and it is expected that the system will use the coded value when the attribute is conveyed in later transactions:

DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the EHR technology's ability to display required core data elements from the information received in the Evaluated Immunization History and Immunization Forecast Z42 response message. Additional data from the message or from the EHR are permitted to be displayed by the EHR. Grayed-out fields in the Juror Document indicate where no data for the data element indicated were included in the Z42 message for the given Test Case.

The format of this Juror Document is for ease-of-use by the Tester and does not indicate how the EHR display must be designed.

The Evaluated Immunization History and Immunization Forecast data shown in this Juror Document are derived from the Z42 message provided with the given Test Case; equivalent data are permitted to be displayed by the EHR. The column headings are meant to convey the kind of data to be displayed; equivalent labels/column headings are permitted to be displayed by the EHR.

When displayed in the EHR with the Evaluated Immunization History and Immunization Forecast, these patient demographics data may be derived from either the received immunization message or the EHR patient record. When displaying demographics from the patient record, the EHR must be able to demonstrate a linkage between the demographics in the message (primarily the patient ID in PID-3.1) and the patient record used for display to ensure that the message was associated with the appropriate patient.

5.3.2. Receive ACK Z23 Fatal Error - CVX Code

Test Step Type: TA_RESPONDER

The Immunization Registry returns a fatal error message indicating a table mapping error for the CVX code submitted was found during the course of filing the message.

Test Story

Description
The Immunization Registry returns a fatal error message indicating a table mapping error for the CVX code submitted was found during the course of filing the message.
Comments
No Comments
Pre Condition
A VXU message is generated by the EHR.
Post Condition
The ACK Z23 is received by the EHR.
Test Objectives
Transmit Standard Patient Immunization History Report: The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries.
Error Handling Support for a fatal error returned by the IIS, and the ability of the EMR to display a notification of this error to the user.
Evaluation Criteria
The acknowledgement error message is consumed by the system responsible for the content of the administration message. The error returned is visible in the EMR .
Notes for Testers
Important note regarding the MSH-10 and MSA-2: The NIST acknowledgment message is predefined and is based on the VXU message. Most systems will automatically create the message control Identifier and may require it for importing, linking, and processing the ACK message. The NIST ACK test message can be modified such that MSA-2 matches MSH-10 of the VXU message generated by the system-under test.

DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the EHR technology's ability to display required core data elements from the information received in the Evaluated Immunization History and Immunization Forecast Z42 response message. Additional data from the message or from the EHR are permitted to be displayed by the EHR. Grayed-out fields in the Juror Document indicate where no data for the data element indicated were included in the Z42 message for the given Test Case.

The format of this Juror Document is for ease-of-use by the Tester and does not indicate how the EHR display must be designed.

The Evaluated Immunization History and Immunization Forecast data shown in this Juror Document are derived from the Z42 message provided with the given Test Case; equivalent data are permitted to be displayed by the EHR. The column headings are meant to convey the kind of data to be displayed; equivalent labels/column headings are permitted to be displayed by the EHR.

Patient Information		
Element Name	Data	Tester Comment
When displayed in the EHR with the Evaluated Immunization History and Immunization Forecast, these patient demographics data may be derived from either the received immunization message or the EHR patient record. When displaying demographics from the patient record, the EHR must be able to demonstrate a linkage between the demographics in the message (primarily the patient ID in PID-3.1) and the patient record used for display to ensure that the message was associated with the appropriate patient.		

5.3.3. Transmit the Immunization Report for Juana Maria Gonzales Morales - warning handling

Test Step Type: SUT_INITIATOR

The EMR sends the Immunization Report to the Immunization Registry (VXU/Z22) for updated vaccination information from the visit. This will result in a warning from the IIS to assess the EMR ability to receive and display the warning.

Test Story

Description
Following the visit, the EMR transmits an Immunization report to the Immunization Registry using the VXU/Z22. This will result in multiple warnings from the IIS to assess the EMR ability to receive and display the error.
Comments
The Report must include the newly administered vaccine recorded in the EMR. The report may include the information imported from the IIS
Pre Condition
The vaccines for the visit have been administered.
Post Condition
The Immunization Report has been transmitted to the IIS using a valid Z22 VXU in accordance with the test data correctly and without omission.
Test Objectives
Transmit Standard Patient Immunization History Report: The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries. Set up to verify that the EMR is able to receive and display the multiple warning response from the IIS.
Link Standard Codes to Immunization Data: The EHR or other clinical software system links standard codes to discrete data elements associated with an immunization. a. NDC codes, CVX for immunizations
Evaluation Criteria
The VXU/Z22 message passes validation using the NIST Immunization VXU Validation Tool (Z22) (context-free). The content of the message correctly reflects the test data (context-based) in accordance with the Test Data Specification and the Message Content.
Notes for Testers
The protection indicator for Juana Maria is 'Yes'. If this setting restricts the EMR from transmitting to the IIS, then the protection indicator for Juana Maria may be modified to 'No' for the purpose of this transaction.

5.3.4. Receive ACK Z23 Warning - Invalid Value

Test Step Type: TA_RESPONDER

The Immunization Registry returns a warning message indicating an invalid administration site code submitted was found during the course of filing the message.

Test Story

Description
The Immunization Registry returns a warning message indicating an unrecognized administration site code submitted was found during the course of filing the message.
Comments
No Comments
Pre Condition
A VXU message is generated by the EHR.
Post Condition
The ACK Z23 is received by the EHR.
Test Objectives
Transmit Standard Patient Immunization History Report: The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries. Error Handling Support for a warning returned by the IIS, and the ability of the EMR to display a notification of this warning to the user.
Evaluation Criteria
The acknowledgement warning message is consumed by the system responsible for the content of the administration message. The warning returned is visible in the EMR .
Notes for Testers
Important note regarding the MSH-10 and MSA-2: The NIST acknowledgment message is predefined and is based on the VXU message. Most systems will automatically create the message control Identifier and may require it for importing, linking, and processing the ACK message. The NIST ACK test message can be modified such that MSA-2 matches MSH-10 of the VXU message generated by the system-under test.

DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the EHR technology's ability to display required core data elements from the information received in the Evaluated Immunization History and Immunization Forecast Z42 response message. Additional data from the message or from the EHR are permitted to be displayed by the EHR. Grayed-out fields in the Juror Document indicate where no data for the data element indicated were included in the Z42 message for the given Test Case.

The format of this Juror Document is for ease-of-use by the Tester and does not indicate how the EHR display must be designed.

The Evaluated Immunization History and Immunization Forecast data shown in this Juror Document are derived from the Z42 message provided with the given Test Case; equivalent data are permitted to be displayed by the EHR. The column headings are meant to convey the kind of data to be displayed; equivalent labels/column headings are permitted to be displayed by the EHR.

Patient Information		
Element Name	Data	Tester Comment
When displayed in the EHR with the Evaluated Immunization History and Immunization Forecast, these patient demographics data may be derived from either the received immunization message or the EHR patient record. When displaying demographics from the patient record, the EHR must be able to demonstrate a linkage between the demographics in the message (primarily the patient ID in PID-3.1) and the patient record used for display to ensure that the message was associated with the appropriate patient.		

5.3.5. Transmit the Immunization Report for Juana Maria Gonzales Morales - Multiple warning handling

Test Step Type: SUT_INITIATOR

The EMR sends the Immunization Report to the Immunization Registry (VXU/Z22) for updated vaccination information from the visit. This will result in multiple warnings from the IIS to assess the EMR ability to receive and display the warnings.

Test Story

Description
Following the visit, the EMR transmits an Immunization report to the Immunization Registry using the VXU/Z22. This will result in multiple warnings from the IIS to assess the EMR ability to receive and display the warnings.
Comments
The Report must include the newly administered vaccine recorded in the EMR. The report may include the information imported from the IIS
Pre Condition
The vaccines for the visit have been administered.
Post Condition
The Immunization Report has been transmitted to the IIS using a valid Z22 VXU in accordance with the test data correctly and without omission.
Test Objectives
Transmit Standard Patient Immunization History Report: The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries. Set up to verify that the EMR is able to receive and display the multiple warning response from the IIS. Link Standard Codes to Immunization Data: The EHR or other clinical software system links standard codes to discrete data elements associated with an immunization. a. NDC codes, CVX for immunizations
Evaluation Criteria
The VXU/Z22 message passes validation using the NIST Immunization VXU Validation Tool (Z22) (context-free). The content of the message correctly reflects the test data (context-based) in accordance with the Test Data Specification and the Message Content.
Notes for Testers
The protection indicator for Juana Maria is 'Yes'. If this setting restricts the EMR from transmitting to the IIS, then the protection indicator for Juana Maria may be modified to 'No' for the purpose of this transaction.

5.3.6. Receive ACK Z23 Multiple Warnings

Test Step Type: TA_RESPONDER

The Immunization Registry returns a message with multiple warnings for invalid administration site codes submitted found during the course of filing the message.

Test Story

Description
The Immunization Registry returns a message with multiple warnings indicating unrecognized administration site codes submitted were found during the course of filing the message.
Comments
No Comments
Pre Condition
A VXU message is generated by the EHR.
Post Condition
The ACK Z23 is received by the EHR.
Test Objectives
Transmit Standard Patient Immunization History Report: The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries. Error Handling Support for multiple warnings returned by the IIS, and the ability of the EMR to display a notification of these warnings to the user.
Evaluation Criteria
The acknowledgement warning message is consumed by the system responsible for the content of the administration message. The multiple warnings returned is visible in the EMR .
Notes for Testers
Important note regarding the MSH-10 and MSA-2: The NIST acknowledgment message is predefined and is based on the VXU message. Most systems will automatically create the message control Identifier and may require it for importing, linking, and processing the ACK message. The NIST ACK test message can be modified such that MSA-2 matches MSH-10 of the VXU message generated by the system-under test.

DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the EHR technology's ability to display required core data elements from the information received in the Evaluated Immunization History and Immunization Forecast Z42 response message. Additional data from the message or from the EHR are permitted to be displayed by the EHR. Grayed-out fields in the Juror Document indicate where no data for the data element indicated were included in the Z42 message for the given Test Case.

The format of this Juror Document is for ease-of-use by the Tester and does not indicate how the EHR display must be designed.

The Evaluated Immunization History and Immunization Forecast data shown in this Juror Document are derived from the Z42 message provided with the given Test Case; equivalent data are permitted to be displayed by the EHR. The column headings are meant to convey the kind of data to be displayed; equivalent labels/column headings are permitted to be displayed by the EHR.

Patient Information		
Element Name	Data	Tester Comment

When displayed in the EHR with the Evaluated Immunization History and Immunization Forecast, these patient demographics data may be derived from either the received immunization message or the EHR patient record. When displaying demographics from the patient record, the EHR must be able to demonstrate a linkage between the demographics in the message (primarily the patient ID in PID-3.1) and the patient record used for display to ensure that the message was associated with the appropriate patient.
